Accumulation Indexed Universal Life Insurance

About This Illustration

This illustration is intended to assist you in understanding how your policy may perform over time given a specified set of assumptions applied to the features of the policy. The illustration is not intended to predict your actual policy performance.

Certain values shown in this illustration are guaranteed, and other values are not guaranteed. Unless otherwise stated, amounts credited and other values set forth in this illustration are not guaranteed.

Your policy's guaranteed values are determined at policy issue and are guaranteed not to change over the life of the policy. Non-guaranteed values may change from time-to-time in response to actions that you or the insured take, changes that we make, or changes in the Index Segment Interest Credits. For example, the interest rate credited to the Fixed Account may exceed the guaranteed rate, the Segment Growth Rate may exceed the Segment Floor Rate, and monthly charges may be less than their corresponding maximum guaranteed charges. In addition, John Hancock ("we") may change the Segment Cap Rate and the Participation Rate. Illustrated values that are based upon non-guaranteed assumptions may be more favorable to you than the values shown based upon guaranteed assumptions.

We recommend that you request multiple illustrations that assume different Segment Growth Rates to better understand the policy performance under different scenarios.

Also, please review your policy's performance periodically to ensure you are on track to meet your goals. The illustrated Segment Growth Rate used to calculate the illustrated values is hypothetical. If the assumed Segment Growth Rate in an illustration is not achieved, this can have a significant effect on the Policy Value, with the result that you may have to pay more premiums than you had anticipated, or your policy may lapse. We also suggest you request in force illustrations from time to time which will also provide you with an updated projection of policy performance. You should review these documents with your financial professional.

This illustration is not a contract and will not become part of the policy. Descriptions provided in this illustration summarize some of the policy features; however, it does not supersede, nor should it be considered a substitute for, the policy contract. The policy constitutes the actual agreement of coverage and contains the entire terms of the contract. Capitalized terms referred to in this illustration have the meanings given in this illustration or in the policy contract.

The terms and coverage reflected in this illustration are subject to the underwriting process. If the policy is issued other than as applied for, you will receive a revised illustration conforming to the policy as issued prior to or upon delivery of your insurance contract.

The information provided by John Hancock to you or your financial professionals in connection with this sale is not intended as tax, legal, or investment advice or a recommendation to purchase John Hancock products and services. John Hancock and its representatives will receive compensation derived from such sales or services.

Brief Description of the Policy

The Accumulation Indexed Universal Life Insurance policy which you are considering provides death benefit protection and premium payment flexibility. Actions you or the insured take can affect your policy and the premium required to maintain coverage, such as:

- The amount and timing of premiums you pay

**THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Accumulation IUL Form: 26AIUL

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

- Your allocation of policy values among the options available in the policy
- Any loans, withdrawals, or material changes you make to your policy
- The insured's achieving, or not achieving, a certain Status level in regard to your policy's Healthy Engagement benefit

Your policy can also be affected by:

- Changes that we make to the current declared interest rate of the Fixed Account
- Changes in the Index Segment Interest Credits earned by Segments in an Index Account on a Segment Maturity Date
- Changes to the current Cost of Insurance rates
- Changes to the qualification requirements for a Status level in regard to your policy's Healthy Engagement benefit

Premiums You Pay

One of the advantages of Accumulation Indexed Universal Life Insurance is premium payment flexibility, allowing you to vary the amount and frequency of your payments as long as the premiums you pay, less premium charges, and interest amounts credited to your policy are sufficient to cover the Monthly Deductions and any other charges. Premiums are subject to maximum guidelines allowed by the Internal Revenue Code, and premium payments in excess of the Planned Premium are subject to our approval. Policy loans, withdrawals or changes in crediting rates to the Fixed Account or the Indexed Accounts could necessitate additional premium payments to maintain your insurance coverage. Premium limits and requirements may change after issue if unscheduled changes are made or if planned changes are made at different times than originally assumed.

This illustration assumes an initial Planned Premium of \$689,782.00 and that all subsequent premium payments are made at the beginning of each modal period you selected (e.g., monthly, annually). Paying less than the Planned Premium can have a negative impact on the policy and its guarantees. Reduced or discontinued premiums in future years are only possible if the premiums paid and amounts credited are sufficient to cover the Monthly Deduction and any other charges. The Minimum Initial Premium is shown on the Basic Illustration Summary page and is the minimum premium needed to put the policy in force.

Based on the initial Death Benefit and other policy assumptions shown in the illustration, the level annual premium to guarantee coverage for life is \$6,337,468.00. Premiums are subject to maximum guidelines allowed by the Internal Revenue Code.

Please refer to the Basic Illustration Summary page for your initial premium allocation.

Your Death Benefit

This illustration reflects an initial Death Benefit of \$10,000,000 (Option 2). The initial Death Benefit is composed of \$10,000,000 in Base Face Amount and \$0 in Supplemental Face Amount. Starting in Policy Year 21 the Death Benefit illustrated is the Face Amount plus any Required Additional Death Benefit (Option 1). The Net Death Benefit reflects the reduction of the Death Benefit by any Policy Debt (total loans plus any loan interest due).

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.
VALUES SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED UNLESS LABELED AS SUCH.

This is your Basic Illustration and is valid only if all illustration pages are included.

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Accumulation IUL Form: 26AIUL

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

The greater the proportion of Base Face Amount at issue to the Total Face Amount at issue, the higher the Total Face Amount charge will be. This means for the same Total Face Amount at issue, your charge per \$1,000 of Total Face Amount will be higher if you elected a policy without Supplemental Face Amount as opposed to a policy with it. On the other hand, the No-Lapse Guarantee Period will be longer for Base Face Amount coverage than for the Supplemental Face Amount coverage.

If your priority is to reduce your Face Amount charges, you may wish to maximize the proportion of the Supplemental Face Amount. However, if your priority is to take advantage of the No-Lapse Guarantee feature after the fifth Policy Year or to maximize the death benefit when the insured person reaches age 121, then you may wish to maximize the proportion of the Base Face Amount. The No-Lapse Guarantee for the Base Face Amount under any policy that has elected an increasing Supplemental Face Amount, or the Return of Premium Death Benefit Rider is limited to the first five Policy Years.

This policy illustration shows the No-Lapse Guarantee keeping the policy's Base Face Amount in force for 15 years. If increasing Supplemental Face Amount coverage or the Return of Premium rider are elected, No-Lapse Guarantee protection for the Base Face Amount coverage is limited to the first five Policy Years. During the No-Lapse Guarantee Period, if the Net Cash Surrender Value should fall to zero or below, Base Face Amount coverage will continue provided that the No-Lapse Guarantee Cumulative Premium Test is satisfied. After the expiration of the No-Lapse Guarantee Period, if the Net Cash Surrender Value falls to zero or below, you must pay sufficient additional premiums to keep the policy in force. In this illustration, this test is satisfied if the sum of all premiums paid, net of withdrawals and any Policy Debt, is greater than or equal to \$92,865.50 multiplied by the number of years coverage has been in effect.

The No-Lapse Guarantee protects the Supplemental Face Amount coverage and the Return of Premium rider (both if elected) for the first five Policy Years, provided that the No-Lapse Guarantee Cumulative Premium Test is satisfied. In Policy Years six and after, if the Net Cash Surrender Value falls to zero or below, you must pay sufficient additional premiums to keep these coverages in force. If you do not pay additional premiums, the Supplemental Face Amount and the Return of Premium rider may lapse even though your Base Face Amount does not.

Death Benefit Option changes; adding, terminating or changing a rider; an unscheduled increase or decrease to the Supplemental Face Amount coverage; a Base Face Amount decrease; or a change to the Life Insured's Risk Classification or Additional Rating may all cause the No-Lapse Guarantee Premium to be recalculated, or in some cases result in the No-Lapse Guarantee terminating. Note that if a policy loan is outstanding at the time your Net Policy Value falls to zero, the No-Lapse Guarantee will not prevent the policy from lapsing.

Allocation of Your Policy Values and Interest Credits

You may allocate premium or transfer policy value to the Fixed Account or to one or more of the Indexed Accounts described below.

The Fixed Account

The Fixed Account (referred to as the Guaranteed Interest Account in your policy) credits interest daily at a current annual rate that we declare, subject to the Minimum Guaranteed Interest Account Annual Rate of 1%. The Fixed Account is not linked to the performance of any index, and thus is likely to experience lower volatility than the Indexed Accounts. At the same time, the long-term performance of the Fixed Account may be expected to be lower than the Indexed Accounts.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.
VALUES SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED UNLESS LABELED AS SUCH.

This is your Basic Illustration and is valid only if all illustration pages are included.

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Accumulation IUL Form: 26AIUL

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Illustrated values for the current assumptions show an increase in the crediting rate to the Fixed Account beginning with Policy Year 11. This increase is referred to as a "persistency bonus," and it is not guaranteed. We are currently illustrating this increase to be 0.15%. We will only apply the persistency bonus to the portion of your Policy Value that is allocated to the Fixed Account, and to any amount allocated to the Indexed Account that is not yet designated to a Segment (a "Holding Segment").

The Indexed Accounts

The Indexed Accounts offered in the policy are the Base Capped Indexed Account, the Base Capped Bonus Indexed Account, the Select Capped Indexed Account, the Barclays Global MA Classic Indexed Account, the High Capped Indexed Account, the Enhanced High Capped Indexed Account and the Nasdaq Capped Indexed Account. These may be referred to as the Non-Loaned Indexed Accounts. We also offer the Loaned Indexed Account, which references the S&P 500 Index. This account, which may be referred to as the Fixed Index Loan Account, is only available if you have taken a Fixed Index Loan. Not all Indexed Accounts may be approved for use in all states.

This illustration assumes amounts are allocated to the Indexed Accounts to form new Segments on the Issue Date. However, amounts allocated to the Indexed Accounts only form new Segments on the Segment Initiation Date. Depending on the date we receive your premium, there may be a delay of up to one month between the premium receipt date and the Segment Initiation Date when any allocated portion of the premium is included in a new Segment. Premium received before the beginning of a new Segment will be held in the Holding Segment pertaining to your selected Indexed Account(s) and will receive interest in the same rate as amounts in the Fixed Account.

Index Segment Interest Credit

For any Indexed Account that you elect, an Index Segment Interest Credit will be calculated using a formula described in your policy that references an external index ("Index") and Indexed Account parameters:

The Indices that the Indexed Accounts reference are the Standard & Poor's 500 Composite Price Index, the Nasdaq-100 Index and the Barclays Global MA Index. While the Indexed Accounts refer to these Indices, the policy does not directly participate in any stock or equity investments. Each Indexed Account tracks the Index and measures the performance of the Index from the Segment Initiation Date to the Segment Maturity Date, without including dividends.

- **The S&P 500 Index** includes 500 large cap common stocks actively traded in the United States.
- **The Nasdaq-100 Index** is a collection of the 100 largest, most actively traded companies listed on the Nasdaq stock exchange. The index includes companies from diverse industries like manufacturing, technology, healthcare, and others, but excludes those from the financial sector.
- **The Barclays Global MA Index** (the Index) is a rules-based index that has twelve components that provide diversification across asset classes and geographic regions in recognition that the components react differently to the same market or economic environment. The components and the maximum and minimum weights to each component are the following Barclays Bank PLC or its affiliates' indexes or commodities futures:

Barclays JGB Alt Roll 10yr Futures ER Index in USD (BXIJTJED)	0% / 50%

The Index's rules create a component portfolio that allocates among the components based on the Modern Portfolio Theory, on performance momentum, and the volatility of each component, subject to the maximum and minimum weights for each component and a portfolio target volatility of 7%. Allocations based on Modern Portfolio Theory seek to find the allocation among the components that provide the maximum return at a given risk level. Allocations based on performance momentum seek to increase allocations to components with stronger recent performance, and reduce allocation to components with weaker recent performance. Based on these allocation rules, the sum of each component allocation may be as high as 150%. The component portfolio may change daily.

The higher the allocation to fixed income components or the lower exposure to the component portfolio, the lower the potential increase in the Index value. In addition, if at a time the Index has a higher allocation to fixed income components or a lower exposure to the component portfolio, equities experience a rapid upswing, the Index will not increase in value in the same manner as the increase in equities. Moreover, in a rapidly rising interest rate environment, the higher the allocation to fixed income components, the lower the potential increase in the Index value.

Once the component portfolio is constructed, the Index will adjust the exposure to the component portfolio to maintain "volatility control". If the recent volatility of the component portfolio is greater than 7%, the component portfolio exposure will be less than 100%, and may be as low as 25%. If it is less than 7%, the component portfolio exposure can be greater than 100%, and may be as high as 150%. The impact of the maximum sum of the components allocation of 150% together with the maximum volatility control exposure may result in a maximum total component portfolio exposure of 225%. The exposure may change daily.

The change in the Barclays Global MA Index in up market conditions will not be as high, and in down market conditions as low, had there not been the volatility control. Note that the indexed accounts provide down market protection through the Segment Floor Rate of 0%. Thus, the volatility control feature of the Barclays Global MA Index may benefit John Hancock through reduced hedging costs.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

The Index's rationale may not be successful and the ability to construct the component portfolio may not be possible or subject to being recreated on another computer. The Index also takes into account for each component a "running cost" ranging from 0.20% to 0.30% per annum and a "rebalancing cost" ranging from 0.02% to 0.05% depending on the component, and is deducted on the relevant trading day. These costs reduce the daily Index value.

The Indexed Account parameters of each Indexed Account may include a Segment Floor Rate, a Segment Cap Rate, a Participation Rate, a Segment Term, a guaranteed Fixed Bonus, and a guaranteed Indexed Account Multiplier. Discuss these parameters with your financial professional to ensure you understand how they may affect the Index Segment Interest Credit.

The Segment Cap Rate limits the rate that is used in calculating the Index Segment Interest Credit. If the positive index change multiplied by the Participation Rate results in a rate that is higher than the Segment Cap Rate, we will use the Segment Cap Rate to determine the Index Segment Interest Credit. If the positive index change multiplied by the Participation Rate is less than the Segment Cap Rate but greater than the Segment Floor Rate, we would use the index change multiplied by the Participation Rate to determine the Index Segment Interest Credit. Any positive return is further enhanced by a Guaranteed Indexed Account Multiplier, if applicable, in the Index Segment Interest Credit calculation.

Following are the Indexed Accounts currently offered and their respective Indexed Account parameters:

Indexed Account Parameters						
Index Account	Index	Current Segment Cap Rate	Guaranteed Segment Minimum Cap Rate	Current Participation Rate	Guaranteed Indexed Account Multiplier	Index Performance Charge
Base Capped	S&P 500	11.65%	3.00%	100%	0%	0.00%
Base Capped Bonus	S&P 500	8.80%	0.50%	100%	0% *	0.00%
Select Capped	S&P 500	9.75%	3.00%	100%	11%	0.00%
Barclays Global MA Classic	Barclays Global MA	N/A**	N/A	165% (20% minimum)	0%	0.00%
High Capped	S&P 500	12.25%	3.75%	100%	30%	1.98%
Enhanced High Capped	S&P 500	12.65%	4.25%	100%	80%	4.98%
Nasdaq Capped	Nasdaq-100	14.00%	3.00%	100%	0%	0.96%
Loaned Indexed	S&P 500	9.35%	3.25%	100%	0% ***	0.00%

* This account has a 0.85% guaranteed Fixed Bonus Interest Rate.

** While there is no contractual segment cap rate for these accounts, there is a volatility control mechanism built into the Index rules that will impact the returns on these accounts. As described above, the change in the Barclays Global MA Index in up market conditions will not be as high as it would be had there not been the volatility control.

*** This account has a 0.65% guaranteed Fixed Bonus Interest Rate.

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Unless these Indexed Account parameters are guaranteed, the Indexed Account parameters may be changed from time to time by John Hancock for any Segment created after the date of the change. If the Indexed Account parameters are lower than illustrated, the amount of Index Segment Interest Credit applied to your Policy Value will be less. This may affect the long-term performance of your policy and you may need to make additional premium payments in order to keep your policy in force.

John Hancock reserves the right to add Indexed Accounts or cease offering one or more of the Indexed Accounts at any time. We also reserve the right for any Indexed Account to substitute an Index with another Index for any reason. If we substitute an Index for another Index, the Indexed Account will continue to offer the same guaranteed Indexed Account Multiplier and guaranteed Indexed Account parameters. We will give you notice when we do so. Depending on what we add, substitute, or remove, the expected return and volatility relationship among Indexed Accounts might change. You should contact your financial professional to select an allocation that is best for you.

Each Indexed Account has different parameters that presents you with a different risk and return profile and a different range of potential outcomes.

Following are hypothetical examples showing each Indexed Account that is available with this life insurance policy. The examples are using the hypothetical Cap Rate, Participation Rate, guaranteed Multipliers, guaranteed Fixed Bonus Interest and Index Performance Charge and show how the Indexed Accounts would perform under three different index returns, over the Segment Term for the given Indexed Account. While for purposes of comparison the examples below assume the index returns on the S&P 500, Nasdaq-100 and Barclays Global MA Indices are the same, we would not expect the index returns to be the same since, as described above, the indices are made up of different components and the Barclays Global MA Index contains a volatility control mechanism. The Segment Growth Rate is the index change multiplied by the participation rate, subject to the hypothetical cap rate. The crediting rate is the Segment Growth Rate multiplied by one plus the guaranteed Indexed Account Multiplier. The guaranteed Fixed Bonus Interest (if applicable) is added to the crediting rate.

** While there is no contractual segment cap rate for these accounts, there is a volatility control mechanism built into the Index rules that will impact the returns on these accounts. As described above, the change in the Barclays Global MA Index in up market conditions will not be as high as it would be had there not been the volatility control.

These three hypothetical examples show how the combination of an Indexed Performance Charge and an Indexed Account Multiplier results in a wider range of potential outcomes compared to the Indexed Accounts that do not include these parameters. These examples do not take into account the other charges that may be deducted and credits that may be applied to your policy value, or that the Indexed Accounts may be tied to different external indices, which may have different upside potential. **You should request multiple illustrations that assume different Segment Growth Rates to better understand the policy performance under different scenarios. When the Index Segment Interest Credit for any Segment of an Indexed Account is less than the annualized Indexed Performance Charge applicable for that Segment, the effective annual return on the portion of the Policy Value in that Segment will be negative.**

Your financial professional can help you understand how these Indexed Accounts will operate under different scenarios, and which of the Indexed Accounts, or the Fixed Account, might be best given your financial objectives and risk tolerance. Your financial professional can also help you to understand how the policy might be expected to perform in adverse scenarios, such as where Indexed Account parameters are changed so that they are closer to their respective guarantees, and how those changes to the Indexed Account parameters will impact the amount of premium that you will have to pay to maintain the policy in force.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.

Historical Index Changes and Hypothetical Interest Credits

S&P 500 Index

The following tables show the annualized actual historical Index Change in the S&P 500 Index and the corresponding hypothetical annualized Index Segment Interest Credit for each Indexed Account that references the S&P 500 Index over the most recent 25-year period. The table also shows the geometric average for both the annualized actual historical index changes and the corresponding hypothetical annualized rate of Indexed Credits using the current Indexed Account parameters. These values should not be considered a representation of past or future performance of the Indexed Accounts available in a policy. The table assumes the current Indexed Account parameters for the applicable Indexed Accounts shown above.

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Illustrated Segment Growth Rate

Illustrations of indexed universal life insurance policies are developed starting with an assumed hypothetical rate of return that you or your financial professional select, subject to a maximum hypothetical rate of return that is determined by regulation (the "Maximum Segment Growth Rate"). This regulation sets a limit based upon the historical returns of the Index. The Indexed Account parameters are then applied to this hypothetical rate of return to determine the hypothetical maximum crediting rate that will be used to illustrate the values related to your policy. These illustrated values will then be adjusted by any credits added to--and any charges deducted from--your policy value.

The following table shows the 25-year geometric average annual minimum and maximum Segment Growth Rate. Note the Barclays Global MA Index was created in 2021 and does not have data for these 25-year Segment Growth Rates.

Maximum Segment Growth Rate		
	Min	Max
Benchmark Indexed Account	4.77%	8.72%
Base Capped Indexed Account (11.65% Cap)	4.77%	8.72%
Base Capped Bonus Indexed Account (8.80% Cap)	3.99%	7.07%
Select Capped Indexed Account (9.75% Cap)	4.26%	7.56%
Barclays Global MA Classic Indexed Account	N/A	N/A
High Capped Indexed Account (12.25% Cap)	4.89%	9.01%
Enhanced High Capped Indexed Account (12.65% Cap)	4.93%	9.14%
Nasdaq Capped Indexed Account (14.00% Cap)	7.02%	11.04%
Loaned Indexed Account (9.35% Cap)	4.16%	7.36%

It's important to keep in mind that:

- Illustrating the same hypothetical maximum crediting rate each year over the life of the policy may not be not realistic.
- The policy illustration is a presentation of hypothetical values that are based upon assumptions that you or your financial professional determine. The illustration is designed to show how the policy is expected to perform under various conditions, rather than to be a projection of the policy's actual performance.

You should review your policy's performance periodically to ensure you are on track to meet your goals. As an example, if the returns assumed in an illustration are not achieved, this can have a significant effect on the policy value, with the result that you will have to pay more premiums to maintain the policy in force than you had anticipated.

Accessing Your Policy Value

Surrenders

You can surrender your policy for its cash value at any time. We will pay you the Policy Value less a Surrender Charge and any Policy Debt you may have.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.
VALUES SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED UNLESS LABELED AS SUCH.

This is your Basic Illustration and is valid only if all illustration pages are included.

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Withdrawals

After your policy has been in force for one year, you can make partial cash withdrawals. Withdrawals reduce the Policy Value and the Death Benefit, and the amount of the withdrawal may be subject to a Surrender Charge. Withdrawals and any related Surrender Charge amounts are first deducted from the Fixed Account, and then from Segments in the Indexed Accounts (excluding the Loaned Indexed Account) on a proportionate basis. If illustrated, withdrawals are assumed to be taken at the beginning of the month.

A withdrawal from the Indexed Accounts that was not pre-scheduled using the Systematic Withdrawal program will initiate a one-year Lock Out Period during which no new Segments in an Indexed Account may be created except for those resulting from a maturing Segment.

Loans

Policy loans may be taken against the Policy Value at any time. The maximum loan amount available is the policy's Cash Surrender Value at the time of request, less any existing Policy Debt, less Monthly Deductions through the remainder of the Policy Year, all multiplied by one minus the rate of Loan Interest Charged for a policy loan. Interest is charged on the outstanding Policy Debt, and in the event that you do not pay the Loan Interest Charged in any Policy Year, it will be borrowed against the policy and added to the Policy Debt in arrears at the Policy Anniversary.

Your policy offers a choice between a Standard Loan, a Fixed Index Loan, or an Index Loan, though only the Standard Loan option is available during the first Policy Year and only one loan option may be utilized at a time.

The choice of a Standard Loan, Fixed Index Loan or Index Loan can have a significant effect on the net cost of a loan and your Policy Value. Fixed Index Loans and Index Loans can have the effect of amplifying – both positively and negatively – the impact that the performance of the Indexed Accounts have on the policy. Therefore, the risk of policy lapse with a Fixed Index Loan or an Index Loan is greater than it would be with a Standard Loan.

The cost of a Fixed Index Loan or an Index Loan can vary much more substantially than that of a Standard Loan. The net cost of a Fixed Index Loan or an Index Loan equals the Loan Interest Charged less the sum of any Index Segment Interest Credits earned for portions of the loan that are secured by the Indexed Accounts and the Loan Interest Credited to the Loan Account. For instance, assuming there is no Loan Account, a Fixed Index Loan or Index Loan with a loan charged rate of 5% and Index Segment Interest Credit(s) of 0% would result in a net loan cost of 5% – much higher than the cost of a Standard Loan. Conversely, a loan charged rate of 5% and Index Segment Interest Credit(s) of 10% would result in a net loan gain of 5% to the policy.

If projected, policy loans are assumed to be taken at the beginning of the month, and the loan interest rate used in this policy illustration is shown in the Policy Summary. **Please review the illustrated values for the guaranteed assumption illustrations which reflect the Standard Loan Interest Charged Annual Rate for the Standard Loan; the Fixed Index Loan Interest Charged Annual Rate and Index Segment Interest Credits of 0% for the Fixed Index Loan; and the Maximum Loan Interest Charged Annual Rate of 15% and Index Segment Interest Credits of 0% for the Index Loan.** If there is a loan that is collateralized by policy value in the Indexed Accounts, illustrative values for all non-guaranteed assumption illustrations reflect, for the portion of the policy value in the Indexed Accounts used as collateral for loans, a credited rate that takes into account any applicable adjustment for Indexed Account Multipliers but is no greater than the Loan Interest Charged rate plus 0.50% and any other applicable current charges and current credits. The illustrative values are hypothetical.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Standard Loan Under the Standard Loan option, loan proceeds and any capitalized loan interest are, to the extent possible, secured by amounts you have in the Fixed Account that are transferred to a Loan Account. Any amount borrowed in excess of amounts in the Fixed Account is secured by the Indexed Accounts, and as Indexed Account Segments mature those proceeds will be transferred to the Loan Account.

The net cost of a Standard Loan equals the Loan Interest Charged less the sum of the Loan Interest Credited to the Loan Account and any Index Segment Interest Credits earned for portions of the loan that may be secured by the Indexed Accounts. The loan interest rate charged is 3.25% in years 1-10, and 3.00% thereafter, and the loan crediting rate will not be less than 1.25% in years 1-10 and 1.00% in years 11+. The difference between the Loan Interest Charged rate and the Loan Interest Credited rate to the Loan Account is known as the Loan Interest Credited Differential. The Loan Interest Credited Differential is guaranteed to be no greater than 2.00%.

Fixed Index Loan Under the Fixed Index Loan option, loan proceeds and any capitalized loan interest are, to the extent possible, secured by amounts you have in the Indexed Accounts that are transferred to the Loaned Indexed Account. As Segments of the Indexed Accounts mature, Segment Proceeds of the Indexed Accounts are transferred to the Loaned Indexed Account to the extent that Index Loan Principal is greater than the Loaned Indexed Account. Any amounts borrowed in excess of the Indexed Accounts are secured by the Fixed Account.

The net cost of a Fixed Index Loan equals the Loan Interest Charged less the sum of any Index Segment Interest Credit earned for portions of the loan that are secured by the Loaned Indexed Account and the Loan Interest Credited to the Loan Account. The loan interest rate charged is guaranteed not to exceed the Fixed Index Loan Interest Charged Annual Rate in all years and the loan crediting rate is guaranteed not to be less than the Segment Floor Rate. If a Fixed Index Loan is illustrated, the Loan Interest Credited rate to the Loaned Indexed Account will not be any greater than the Loan Interest Charged rate plus 0.5%.

We may restrict your ability to take an additional Fixed Index Loan if your request for such a loan is made within 12 months of repaying all or a portion of a Fixed Index Loan. If the limitation on Fixed Index Loan is in effect, you may still take a Standard Loan or an Index Loan by requesting a Loan Option Change.

Index Loan Under the Index Loan option, loan proceeds and any capitalized loan interest are, to the extent possible, secured by amounts you have in the Indexed Accounts. Amounts from the Indexed Accounts used to secure a loan remain in Indexed Account Segments, where those Segments may earn a Segment Interest Credit upon Segment Maturity. Any amount borrowed in excess of the Indexed Accounts is secured by the Fixed Account. Index Loan interest rates are variable and subject to change annually on the Annual Processing Date.

The net cost of an Index Loan equals the Loan Interest Charged less the sum of any Index Segment Interest Credit earned for portions of the loan that are secured by the Indexed Accounts and the Loan Interest Credited to the Loan Account. The loan interest rate charged is guaranteed not to exceed 15% in all years, and the loan crediting rate is guaranteed not to be less than the Segment Floor Rate. If an Index Loan is illustrated, the Loan Interest Credited rate to the Indexed Accounts will not be any greater than the Loan Interest Charged rate plus 0.5%.

Other Policy Features and Benefits

Policy Continuation at Age 121

Provided your coverage is in effect on the policy anniversary nearest the date on which the Life Insured reaches attained age 121, coverage will continue thereafter. We will continue to credit interest to the Fixed Account, and when applicable, apply Index Segment Interest Credits to any Index Account Segments at each Segment Maturity Date. No additional charges, other than those for any outstanding policy loans, will be deducted.

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Valuable Information About Your Life Insurance Illustration (cont'd)

Accumulation IUL Form: 26AIUL

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh	Initial Death Benefit \$10,000,000
Female - Preferred NonSmoker	Base Face Amount \$10,000,000
Age: 44	Initial Planned Premium: \$689,782.00 / Billing Mode: Annual
Initial Assumed Status: Bronze	Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21
	Guideline Premium Test; State: California
	Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Tax implications with respect to policies that continue beyond age 121 are not clear at the present time. We urge you to consult with your tax advisor regarding this issue.

Healthy Engagement Rider (Vitality PLUS)

The Healthy Engagement Rider provide the opportunity each year, beginning in policy year 2, to apply a Rider Credit to your Policy Value based on the Status achieved by the Life Insured. There are four Status levels: Bronze, Silver, Gold and Platinum. The achievement of a Status other than Bronze is dependent upon the Life Insured meeting certain Status Qualification Requirements in each year. On each Annual Processing Date, John Hancock will use the Life Insured's current Status as of that date to determine a schedule of Rider Credits that will be applied in the current policy year and the subsequent 19 policy years. The formula for determining Rider Credits is described in the policy and guaranteed not to change. The Status Qualification requirements may be changed, as described in the policy. Current Status Qualification Requirements can be found on www.JohnHancockVitality.com.

The rider is available for an additional charge of \$2 per month deducted from your Policy Value. This charge will be deducted regardless of whether the Life Insured participates in the program and any Rider Credits are added to the Policy Value. If you elect this rider, you may discontinue it at any time and the rider charge will no longer be deducted from your Policy Value. The rider charge will cease when the Life Insured attains age 80, but they may continue to earn a Status. At the earlier of attained age 80 or the discontinuation of this rider, no new Rider Credits will be earned, and all previously earned Rider Credits will continue to apply as described in the policy. This rider cannot be reinstated after discontinuation.

This illustration assumes the Life Insured achieves a Status of Bronze. Achieving a different Status will affect the amount of Rider Credits applied. Rider Credits are applied to the Policy Value, and may be used to reduce the amount of premium required to maintain coverage.

This table shows how achieving different Statuses could affect the continuation of coverage, keeping other assumptions constant (including planned premiums, issue age, risk class, current charges, and assumed interest crediting rate):

Assumed Status (all years)	Attained Age at Lapse*
Platinum	N/A
Gold	N/A
Silver	N/A
Bronze	N/A
* The attained age at lapse is hypothetical and based on the same assumed premium payments and non-guaranteed factors shown on the Basic Illustration Summary page.	

This illustration also includes a hypothetical scenario that assumes the Life Insured remains at Bronze status in all years and receives no Rider Credits. You may request additional illustrations with different assumptions to understand how a Status change can affect your policy.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.
VALUES SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED UNLESS LABELED AS SUCH.

This is your Basic Illustration and is valid only if all illustration pages are included.

John Hancock Life Insurance Company (U.S.A.)

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Accumulation IUL Form: 26AIUL

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

John Hancock will treat the monthly rider charges as distributions from your life insurance policy for federal income tax purposes, and thus such charges may be includable in your taxable income if the policy is a MEC or the cost basis is \$0. If the policy is a MEC, a 10% penalty tax also may apply. See the "Taxation Of Life Insurance" section of this illustration for additional information. The value of some of the rewards such as gift cards and other cash equivalents may be includable in your taxable income and John Hancock would have to report them to the IRS on Form 1099-MISC if the combined value equals or exceeds the reporting threshold for the year. Since the tax treatment of such benefits is subject to some uncertainty, you should consult your own tax advisor.

Overloan Protection Rider

The Overloan Protection Rider will prevent your policy from lapsing when, on any monthly processing date, the outstanding indebtedness on the policy equals or exceeds the Policy Value multiplied by a set percentage (varying by attained age), not to exceed 95%. Exercise of this rider will result in a "paid up" status. This rider may be exercised anytime after the insured reaches age 75 if the following criteria are met. The policy must have been in force for at least 15 years and may not be a Modified Endowment Contract. Policy Indebtedness must exceed the Total Face Amount of your policy but be less than the Policy Value less the one-time charge for exercising the rider. Your policy will also need to have a Level Death Benefit upon execution of the rider. After deduction of the one-time rider charge, all policy value will be transferred to the Fixed Account, if necessary at Segment Maturity. No additional policy transactions or policy changes will be allowed and no further monthly deductions will be taken. Your total Net Death Benefit will now be equal to the Total Face Amount plus any Required Additional Death Benefit less any indebtedness. This rider may not be available in all states.

When the Overloan Protection Rider is exercised, the entire Policy Value is immediately transferred to the Fixed Account. Since the Internal Revenue Service ("IRS") has not ruled on the tax consequences of exercising the Overloan Protection Rider, it is possible that the IRS could assert that the policy has been effectively terminated and that the outstanding loan balance should be treated as a distribution. If this were to occur, all or a portion of the outstanding loan balance could be taxable when the rider is exercised. You should consult your tax advisor regarding these possible tax consequences.

TAXATION OF LIFE INSURANCE

Important Notice

The information contained in this illustration is based on certain tax and legal assumptions. We suggest that you seek professional tax counsel regarding the interpretation of current tax laws and accounting practices as they relate to your actual situation. This material does not constitute tax or legal advice and neither John Hancock nor any of its agents, employees or registered representatives are in the business of offering such advice. You should consult with your own tax advisor.

Definition of Life Insurance

Definition of Life Insurance testing has been performed on the assumed scale only and is dependent on the assumptions in that projection. It may not be applicable to the alternate projections shown.

In order to qualify for the income tax advantages of life insurance, a life insurance policy must satisfy one of two Definition of Life Insurance tests under Internal Revenue Code (IRC) Section 7702. This illustration uses the Guideline Premium Test which requires that the sum of premiums paid reduced by non-taxable withdrawals and other non-taxable distributions at any time does not exceed the Guideline Premium Limit. It also requires that the Death Benefit be increased if the Policy Value grows too large relative to the Death Benefit. Guideline Premiums Limits are determined at issue and are recalculated upon policy changes. In some cases, a recalculation of the Guideline Premiums may cause the Guideline Premium Limit to reduce either immediately or over time. This may require us to force out a portion of your Policy Value.

THIS IS AN ILLUSTRATION ONLY AND IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE.
VALUES SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED UNLESS LABELED AS SUCH.

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

The additional death benefit (described above) that is required in order to satisfy the Definition of Life Insurance is referred to as **Required Additional Death Benefit**.

Income Tax Treatment of Distributions from a Life Insurance Policy

Pre-death Distributions

The Cash Surrender Value in a life insurance policy grows on a tax-deferred basis. The Cash Surrender Value growth (gain) is not taxed unless it is distributed to the policyholder. If properly structured, you can access your Cash Surrender Value to provide a tax-free income subject to the limitations described below.

A policyholder may access their Cash Surrender Value prior to death by surrendering the policy, by taking a withdrawal or by taking a loan. Force outs under the Guideline Premium Test and certain rider charges are also treated as distributions from the policy's Cash Surrender Value. If the policy is not a Modified Endowment Contract (described below), these pre-death distributions are generally treated as a return of the policyholder's investment in the contract (cost basis). Most distributions reduce the policyholder's investment in the contract (cost basis) until it has been reduced to \$0. Any further distributions would be considered to be paid from the gain in the policy and are includible in gross income.

Exceptions:

- A loan is not considered to be a distribution from the policy for tax purposes unless the policy lapses or is surrendered with an outstanding loan or the policy is a MEC. The outstanding loan is included in the Cash Surrender Value used for determining the gain in the policy, which may result in the loan being taxable upon surrender or lapse, even if net Cash Surrender Value paid to the policyholder at that time is \$0.
- Withdrawals and guideline premium force outs in the first 15 years from heavily funded non-MECs are taxed on a gain-first basis under the recapture ceiling of IRC Section 7702(f)(7).

Modified Endowment Contract (MEC)

The Technical and Miscellaneous Revenue Act (TAMRA) of 1988 classifies some policies as Modified Endowment Contracts (MECs). A policy is classified as a MEC if it fails to satisfy the 7-Pay Test of IRC section 7702A. The test is failed if the sum of premiums paid reduced by non-taxable withdrawals and other non-taxable distributions at any time in the first 7 years exceeds the sum of the annual 7-Pay premiums (the 7-Pay Limit). The annual 7-Pay Premium is the premium that would fund the policy under prescribed assumptions in the first 7 years. Certain policy changes will require adjustments to the 7-Pay Premiums and may require the test to be performed again. Pre-death distributions from a MEC, and those taken during the two years before a policy has become a MEC, are subject to less favorable (gain-first) income tax treatment than a non-MEC Life Insurance Contract and may also be subject to a 10% penalty tax. Your policy is in a gain position when the Policy Value is greater than the investment in the contract (cost basis). Unlike non-MEC tax treatment, loans from and assignments of a policy are also distributions from a MEC and are subject to gain-first taxation. We recommend you consult your tax advisor prior to taking any action on your policy that may cause it to become a MEC.

TAMRA testing has been performed on the assumed scale only and is dependent on the assumptions in that projection. It may not be applicable to the alternate projections shown. The initial annual 7-pay premium for this policy is \$689,782.00.

Based on our interpretation of TAMRA, this policy as illustrated would not be considered a Modified Endowment Contract (MEC). Whether and when your policy might become a MEC depends on the timing and amounts of premium payments, withdrawals you take, changes in the policy's non-guaranteed elements, your actual use of the policy's options, and any policy changes you make. For more information please select the TAMRA Optional Report.

Valuable Information About Your Life Insurance Illustration (cont'd)

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Payment or Accelerations of Death Benefits

Subject to certain exceptions described in Employer-owned Life Insurance below, payments of the Death Benefit (including accelerations of the Death Benefit under a Long-Term Care or Terminal Illness Rider) are intended to be income tax free, regardless of whether or not your policy is classified as a MEC. With appropriate planning, Death Benefits may also be received estate tax free.

Employer-owned Life Insurance

If the owner of the policy is the employer of the life insured, Section 101(j) of the Internal Revenue Code specifies a number of requirements that must be satisfied in order for life insurance death benefits to be excluded from income taxation. The life insureds must be the employer's directors and "highly compensated" employees (as is defined by law). If the life insured is not a director or highly compensated employee, then the policy's death benefit must be paid out to the life insured (or to the life insured's designated beneficiary) or used to redeem an equity interest in the employer. **Before the issuance of the policy**, the insured must (1) be notified in writing that the employer/policy owner intends to insure the employee's life and the maximum face amount for which the employee could be insured; (2) give his/her written consent to being insured under the policy and agree that such coverage may continue after the life insured terminates employment; and (3) be informed in writing that the employer/policy owner will be a beneficiary of any proceeds payable upon the death of the life insured. Finally, the employer/policy owner is required to keep records and make an annual report concerning its employer-owned life insurance policies. Taxpayers should seek the counsel of qualified tax professionals to determine the applicability of IRC Section 101(j) or other provisions of federal tax law and/or compliance with the requirements of any such law or regulation.

Other Considerations

This illustration assumes that the currently illustrated non-guaranteed elements will continue unchanged for all years shown. This is not likely to occur, and the actual results may be more or less favorable. Non-guaranteed elements are subject to change by the insurer. Future credits and deductions can vary at the company's discretion depending upon factors such as death claims, investment earnings and expenses, as well as policy owner actions such as timing and amount of premium payments, policy lapse and reinstatement, loans and withdrawals, and contractual charges.

Current	42.95	25.26	4.86	-0.06
Non-guaranteed Element	2.75	5.48	18.98	25.26

Interest Adjusted Indexes

These indexes provide a means for evaluating the comparative cost of the policy under stated assumptions. They can be useful in comparing similar plans of insurance, a lower index being better than a higher one. These indexes reflect the time value of money. Indexes are approximate because they involve assumptions, including the rate of interest used.

† If elected on the Coverage Details form.

**** Illustrated values for all non-guaranteed assumption illustrations reflect the application of the guaranteed Indexed Account Multiplier, or Fixed Bonus interest, where applicable, to the Segment Growth Rate and, as a result, such illustrated values will be greater than if the illustrated values only reflected the Segment Growth Rate.

The guaranteed Indexed Account Multiplier for the High Capped Indexed Account is 30%. The guaranteed Indexed Account Multiplier for the Enhanced High Capped Indexed Account is 80%. The guaranteed Indexed Account Multiplier for the Select Capped Indexed Account is 11%. The Base Capped Indexed Account, Base Capped Bonus Indexed Account, Barclays Global MA Classic Indexed Account, Nasdaq Capped Indexed Account and Loaned Indexed Account do not have an Indexed Account Multiplier. The Indexed Segment Interest Credit on the Segment Maturity Date is equal to the Adjusted Segment Crediting Balance, multiplied by (1 + the guaranteed Indexed Account Multiplier, where applicable) multiplied by the Segment Growth Rate. Illustrated values include any Indexed Segment Interest Credit.

The guaranteed Fixed Bonus annual rate for the Base Capped Bonus Indexed Account is 0.85%. The guaranteed Fixed Bonus rate for the Loaned Indexed Account is 0.65%. This rate is applied to Segment Balances in the Base Capped Bonus and the Loaned Indexed Account no less frequently than annually.

This is your Basic Illustration and is valid only if all illustration pages are included.

Understanding Potential Loan Costs

Accumulation IUL Form: 26AIUL

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Below are hypothetical examples of the net loan cost (and in some cases gain) associated with taking either a Standard, Index Loan or a Fixed Index Loan. Example 1 assumes that the Standard Loan is fully secured by the Fixed Account, and uses a Fixed Loan Charge Rate of 3%. Examples 2 and 3 assume that the Index Loans are fully secured by the Select Capped Indexed Account which has a guaranteed Indexed Account Multiplier of 11%, and a hypothetical Loan Charge Rate of 5.5%. Examples 4 and 5 assume that the Fixed Index Loans are fully secured by the Loaned Indexed Account which has no guaranteed Indexed Account Multiplier, a Fixed Bonus Interest, and a Loan Charge Rate of 5.5%. All five scenarios assume a \$100,000 Policy Value at the beginning of the loan period and annual loans of \$10,000 are taken at the beginning of the Policy Year. In order to isolate the impact of the loan option and assumed crediting rate, no policy charges are assumed.

Example 1 - Standard Loan- Current Loan Charge Rate & Current Loan Account Crediting Rate

Assumed Crediting Rate	5.20%	Loan Rate Charged	3.00%
Assumed Loan Account Crediting Rate	3.00%	Net Loan Cost	0.00%

Policy Year	Annual Loan Requested	Annual Loan Amount	Loan Account Credited Amount	Loan Charged Amount	Cumulative Net Loan Cost	Net Cash Surrender Value
11	(10,000)	10,000	300	300	-	94,980
12	(10,000)	10,300	609	609	-	89,692
13	(10,000)	10,609	927	927	-	84,123
14	(10,000)	10,927	1,255	1,255	-	78,257
20	(10,000)	13,048	3,439	3,439	-	35,897

Under current assumptions, the rate of interest credited to the policy's Loan Account equals the rate of interest charged for the loan after Policy Year 10. Therefore, in this example the net cost of the Standard Loan is zero. In Policy Years 1-10 the net cost of the loan will be greater than reflected in the example above.

Example 2 - Index Loan - Current Loan Charge Rate & an Assumed 2.00% Segment Growth Rate

Assumed Crediting Rate	2.00%	Loan Rate Charged	5.50%
Assumed Loan Account Crediting Rate	N/A	Net Loan Cost	3.28%

Policy Year	Annual Loan Requested	Annual Loan Amount	Indexed Account Credited Amount	Loan Charged Amount	Cumulative Net Loan Cost	Net Cash Surrender Value
11	(10,000)	10,000	222	550	(328)	92,220
12	(10,000)	10,550	456	1,130	(1,002)	83,939
13	(10,000)	11,130	703	1,742	(2,041)	75,129
14	(10,000)	11,742	964	2,388	(3,465)	65,757
20	(10,000)	16,191	2,858	7,081	(21,371)	(4,199)

Under an Index Loan, when the rate of interest charged for that loan exceeds the Segment Growth Rate earned in the Indexed Account, the net cost of holding that loan can be substantial.

Example 3 - Index Loan - Current Loan Charge Rate & an Assumed 9.50% Segment Growth Rate

Assumed Crediting Rate	9.50%	Loan Rate Charged	5.50%
Assumed Loan Account Crediting Rate	N/A	Net Loan Gain	5.05%

Policy Year	Annual Loan Requested	Annual Loan Amount	Indexed Account Credited Amount	Loan Charged Amount	Cumulative Net Loan Cost	Net Cash Surrender Value
11	(10,000)	10,000	1,055	550	505	100,545
12	(10,000)	10,550	2,167	1,130	1,541	101,652
13	(10,000)	11,130	3,341	1,742	3,140	103,408
14	(10,000)	11,742	4,579	2,388	5,330	105,911
20	(10,000)	16,191	13,577	7,081	32,870	143,762

Under an Index Loan, when the Segment Growth Rate earned in the Indexed Account exceeds the rate charged for that loan, the result would be a net loan gain to the policy.

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Example 4 - Fixed Index Loan (Loaned Indexed Account) – Current Loan Charge Rate & an Assumed 2.00% Segment Growth Rate

Assumed Crediting Rate	2.00%	Loan Rate Charged	5.50%
Assumed Loan Account Crediting Rate	N/A	Net Loan Cost	2.85%

Policy Year	Annual Loan Requested	Annual Loan Amount	Indexed Account Credited Amount	Loan Charged Amount	Cumulative Net Loan Cost	Net Cash Surrender Value
11	(10,000)	10,000	200	550	(350)	92,000
12	(10,000)	10,550	411	1,130	(1,069)	83,490
13	(10,000)	11,130	634	1,742	(2,178)	74,441
14	(10,000)	11,742	868	2,388	(3,698)	64,821
20	(10,000)	16,191	2,575	7,081	(22,804)	(6,854)

Under a Fixed Index Loan, when the rate of interest charged for that loan exceeds the Segment Growth Rate earned in the Indexed Account, the net cost of holding that loan can be substantial.

Example 5 - Fixed Index Loan (Loaned Indexed Account) – Current Loan Charge Rate & an Assumed 8.75% Segment Growth Rate

Assumed Crediting Rate	8.75%	Loan Rate Charged	5.50%
Assumed Loan Account Crediting Rate	N/A	Net Loan Gain	3.25%

Policy Year	Annual Loan Requested	Annual Loan Amount	Indexed Account Credited Amount	Loan Charged Amount	Cumulative Net Loan Cost	Net Cash Surrender Value
11	(10,000)	10,000	875	550	325	98,750
12	(10,000)	10,550	1,798	1,130	993	97,716
13	(10,000)	11,130	2,772	1,742	2,022	96,934
14	(10,000)	11,742	3,799	2,388	3,434	96,445
20	(10,000)	16,191	11,266	7,081	21,175	102,609

Under a Fixed Index Loan, when the Segment Growth Rate earned in the Indexed Account exceeds the rate charged for that loan, the result would be a net loan gain to the policy.

You should consider the potential effect that each type of loan can have on your policy before taking a loan.

John Hancock Life Insurance Company (U.S.A.)

A LIFE INSURANCE POLICY ILLUSTRATION

A Flexible Premium Universal Life Insurance Policy

Accumulation IUL Form: 26AIUL

Glossary of Terms

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Advance Contribution Charge

An Advance Contribution Charge is assessed on each monthly processing date when the cumulative premiums paid exceed the Advance Contribution Limit times the current Policy Year. It is deducted for the first 20 Policy Years. The Advance Contribution Charge rates and Advance Contribution Limit are both shown in the policy contract.

Base Face Amount Charge

The Base Face Amount Charge is \$0.3153 per \$1,000 of Base Face Amount per policy month in years 1-3. In years 4-15, the rate is \$0.3153. This charge varies by the insured's issue age, gender, risk classification and the policy duration.

Cost of Insurance

Current insurance charges are based on Company experience. The current rates may change, but are guaranteed never to exceed the maximum rates. Maximum rates are no greater than the 2017 Loaded CSO Composite Ultimate Age Nearest Birthday mortality tables, adjusted for any applicable ratings.

Death Benefit Option

Death Benefit Option 1 provides a level amount of coverage. It will increase only when necessary to maintain the definition of life insurance. Death Benefit Option 2 provides coverage equal to the Face Amount plus the Policy Value plus any amount necessary to maintain the definition of life insurance.

Fixed Bonus Interest

The Fixed Bonus is a rate applied to Segment Balances in the Base Capped Bonus Indexed Account and Loaned Indexed Account. This rate is guaranteed at 0.85% for the Base Capped Bonus Indexed Account, and 0.65% for the Loaned Indexed Account and will be applied no less frequently than annually.

Guaranteed Indexed Account Multiplier

The guaranteed Indexed Account Multiplier is a rate applied to the Index Segment Interest Credit at the end of the segment. This rate increases the interest earned in each Indexed Account segment. The guaranteed Indexed Account Multiplier varies by Indexed Account.

Index Change

The Index Change is the difference in the index from the beginning to the end of a Segment.

Indexed Performance Charge

The Indexed Performance Charge is equal to 0.165% (1.98% annualized) multiplied by the Policy Value in the High Capped Indexed Account, plus 0.415% (4.98% annualized) multiplied by the Policy Value in the Enhanced High Capped Indexed Account, plus 0.08% (0.96% annualized) multiplied by the Policy Value in the Nasdaq Capped Indexed Account. The charge is deducted monthly on a pro-rata basis from the Non-Loaned Indexed Accounts.

Lock In Date

The Lock In Date is the business day prior to the beginning of a new Segment. All requests for allocation changes to Indexed Accounts must be received by the Lock in Date in order to be included in the next segment balance.

Monthly Administrative Charge

A monthly Administrative Charge of \$20.00 will be assessed in all years, current and guaranteed.

Presented By: Nick Burgess

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

Net Death Benefit

The Death Benefit illustrated is the Base Face Amount plus any Required Additional Death Benefit. This is the value that is payable upon the death of the insured as stated on the front page of the policy. The actual amount payable may be decreased by loans or increased by additional insurance benefits. Death Benefits are illustrated as of the end of the year. Net Death Benefit reflects the total loan plus any loan interest due.

Net Income

Net Income reflects any illustrated withdrawal, policy loan and/or loan interest due.

Net Surrender Value

The Net Surrender Value is the Policy Value less Surrender Charge(s), and is illustrated as of end of the year. This amount is shown net of withdrawals and total loans plus loan interest due. If the policy terminates for any reason, the amount of any outstanding loan (that was not previously considered income) could result in a considerable tax. Under certain situations involving large amounts of outstanding loans, you might find yourself having to choose between high premium requirements to keep your policy from lapsing and a significant tax burden if you allow the lapse to occur. Please consult your tax advisor for further information.

Participation Rate

The Participation Rate is the percentage of the Index Change (change in the value of the Index over the Segment Term) that will be recognized in the calculation of the Segment Growth Rate.

Planned Premium Outlay

The Planned Premium Outlay is the amount which the policyholder plans to pay. This illustration assumes that Planned Premiums are paid at the beginning of each modal period indicated. Additional premiums may be paid while the policy is in force, subject to our minimum and maximum limits.

Policy Value

The Policy Value is the sum of all amounts held in the policy including the Fixed Account, the Index Appreciation Account, and any value in the Loan Account. When premiums are paid, the balance, after a premium charge is deducted, is allocated between the Fixed Account and the Non-Loaned Indexed Accounts, per your instructions. The Fixed Account is credited daily with a guaranteed interest rate of 1.00% or the current rate, whichever is greater. Segments in the Index Appreciation Account may earn an Index Segment Interest Credit at each Segment Maturity Date, subject to a guaranteed Segment Floor Rate of 0%. Also, once each month, Cost of Insurance and any other charges are deducted proportionately from both the Fixed Account and the Index Appreciation Account.

Cumulative Guarantee Accumulation IUL policies also include a Cumulative Guarantee used for purposes of calculating Minimum Death Benefit, Insurance Benefit and the Cash Surrender Value. The Policy Value used for these purposes (only) is the greater of the Policy Value described above and the Cumulative Guaranteed Policy Value which is determined in the same manner as the Policy Value except that:

- Net Premiums accumulate with interest in the manner applicable to amounts accumulated in the Fixed Account;
- Monthly Deductions and withdrawals, including any applicable charges, are made from the amount accumulated as described above, in the manner applicable to the Fixed Account;
- The Indexed Performance Charge, if applicable, that is deducted will be determined by multiplying the Indexed Performance Charge deducted from the Policy Value in that month by the ratio of the Cumulative Guarantee Policy Value immediately before the Monthly Deductions, divided by the Policy Value immediately before the Monthly Deductions; and

Illustration Assumptions

Swati Chugh

Female - Preferred NonSmoker

Age: 44

Initial Assumed Status: Bronze

Initial Death Benefit \$10,000,000

Base Face Amount \$10,000,000

Initial Planned Premium: \$689,782.00 / Billing Mode: Annual

Initial Death Benefit Option 2; Death Benefit Option 1 Starting In Year 21

Guideline Premium Test; State: California

Based on Current Charges and Initial Assumed Segment Growth Rate of 0.00%

- A Cumulative Guaranteed Interest Rate of 5.00% in years 1-3 and 2.00% thereafter is used to credit this amount.

The Cumulative Guarantee does not increase the amount available for withdrawals or policy loans, and does not affect the amount available for transfers or allocations.

Premium Charge

A Premium Charge of 7.0% is deducted from each premium in year 1. In years 2-10 the charge is 6.0%. In years 11+, the charge is 2.0%.

Risk Class

Classifications represent groups of people with similar risk characteristics and help to determine the Cost of Insurance.

Segment Cap Rate

The Segment Cap Rate limits the rate used in calculating the Index Segment Interest Credit. The Segment Cap Rate varies by Indexed Account.

Segment Floor Rate

The Segment Floor Rate is the minimum rate used in calculating the Index Segment Interest Credit for a segment. The guaranteed Segment Floor Rate for each Indexed Account is 0.00%.

Segment Initiation Date

The Segment Initiation Date is the first day of a Segment Term. The Segment Initiation Date for each Indexed Account is the monthly processing date.

Segment Term

The Segment Term is the duration from the date the Segment initiates to the date it matures. All indexed accounts have a one year Segment Term.

Supplemental Face Amount Charge

The Supplemental Face Amount Charge is an additional monthly charge of \$0.1158 per \$1,000 of the Supplemental Face Amount at issue, or the current Supplemental Face Amount if greater, in years 1-3. In years 4-15, the rate is \$0.1158. This charge varies by age, gender, risk classification and the policy duration.

Total Face Amount

The Total Face Amount is made up of two components; the Base Face Amount and Supplemental Face Amount (if elected). The Total Face Amount provides insurance payable at the death of the insured. Any decreases to the Total Face Amount must fall within policy minimums, and are only allowed after the first Policy Year.
