Lincoln Financial® affiliates, their distributors, and their respective employees, financial professionals, and/or insurance agents do not provide tax, accounting, or legal advice. Please consult your own independent financial professional as to any tax, accounting, or legal statements made herein.

This hypothetical example is based on data input by your financial professional and may not reflect the actual results of any product. Actual results may differ significantly.

If this material is used in the offering of a specific insurance company contract or policy, it must be preceded or accompanied by any applicable material required for the product offered. Products represented in this report may include market risk, including possible loss of principal.

Lincoln Financial is the marketing name for Lincoln National Corporation and its affiliates, including broker-dealer/distributor Lincoln Financial Distributors, Inc., Radnor, PA, and insurance company affiliates The Lincoln National Life Insurance Company, Fort Wayne, IN, and Lincoln Life & Annuity Company of New York, Syracuse, NY. Affiliates are separately responsible for their own financial and contractual obligations. All guarantees and benefits of an insurance policy are subject to the claims-paying ability of the issuing insurance company.

Commercial Premium Financing

Overview & Strategy

Prepared for: Swati Chugh

Introduction

Growing and protecting your financial legacy may require innovative solutions to achieve your overall financial and estate planning objectives. Life insurance often plays an important role in these plans. The primary reason to buy life insurance is for death benefit protection as a way to pass on assets to your beneficiaries in a tax-efficient manner, and provide financial support for your heirs.

Individuals with large estates may also be concerned with managing their exposure to federal estate and gift taxes. A common estate planning strategy is to purchase life insurance in an irrevocable grantor trust, also known as an Irrevocable Life Insurance Trust (ILIT)¹. An irrevocable trust can be either a grantor trust, or a non-grantor trust. In a grantor trust, income tax is paid by the trust's grantor. In a non-grantor trust, income tax is paid by the trust, or the trust's beneficiaries. In either type of irrevocable trust, the trust assets are effectively removed from the grantor's taxable estate. Therefore, if structured properly the life insurance proceeds will not be subject to income or estate taxes. However, federal tax law limits the amount that can be gifted to an irrevocable grantor trust without the imposition of federal gift taxes.

To meet your life insurance needs, a significant financial outlay for premium payments may be required. Although you have the resources to fund the life insurance, you may be concerned with potential gift taxes associated with premium payments when gifting to an ILIT to pay premiums. You and your financial professional may want to consider premium financing as a potential solution.

What is Premium Financing?

Premium financing is the use of loans from a third party lender to pay life insurance premiums. It is typically used when there is limited cash flow and liquidation of assets is not practical. Minimizing gift taxes can also be a consideration in designing a financing plan.

Highlights

- ◆ Offers a way to ensure adequate life insurance protection without relinquishing control of cash or other assets to pay premiums
- ◆ Allows assets in your existing investment portfolio to grow without disruption to pay insurance premiums
- ◆ Allows you to efficiently manage your annual gift exclusion and lifetime exemption
- ◆ Minimizes up-front out of pocket costs

-The insurance company affiliates of Lincoln Financial require you to qualify both financially and medically for a life insurance policy.

-Lenders may have additional financial requirements.

-Minimum financed premiums vary by lender but are typically in excess of \$100,000 annually, and per Lincoln's guidelines, loan arrangements must be for a minimum of five years.

-Assumes eligibility for premium finance and insurance has been met.

-This presentation assumes eligibility and suitability for premium finance and life insurance has been met. Be sure to request and receive a personal illustration prior to purchasing any policy. For details on Lincoln's Premium Financing Guidelines, please contact your financial professional.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

Commercial Premium Financing

Overview & Strategy, cont'd

Prepared for: Swati Chugh

How it Works

In a typical premium financing arrangement the trustee borrows from a third party lender to purchase life insurance on the grantor's life. The policy cash value can be used as collateral, although additional collateral may be required by the lender.

- ◆ Grantor applies for a loan. Upon approval, the lender loans funds to the trust.
- ◆ The trust purchases life insurance.
- ◆ Annual interest* is paid to the lender. Principal payments may be made during lifetime or at death of the insured.
- ◆ Upon death the lender is repaid and the trust receives any remaining death benefit proceeds.

*The London Inter-Bank Offered Rate (LIBOR) is the prevailing interest rate money center banks typically use to loan funds among each other, and is the most commonly used benchmark for short-term interest rates in the world. LIBOR is significant because it is the most widely used interest rate charged by the lenders that offer life insurance premium financing programs.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

-An weighted assumed rate of 7.19% is used for Illustration values

-Distributions are taken through loans and withdrawals which reduce your policy's cash surrender value and death benefit and may cause the policy to lapse. Loans are not considered income and are tax free. Withdrawals and surrenders are tax-free up to your cost basis, provided your policy is not a modified endowment contract (MEC). A MEC policy is one in which the life insurance limits exceed certain high levels of premium, or the cumulative premium payments exceed certain amounts specified under the Internal Revenue Code. For policies that are MECs, distributions during the life of the insured, including loans, are first treated as taxable to the extent of income in the contract, and an additional 10% federal income tax may apply for withdrawals made prior to age 59½. THIS REPORT IS NOT VALID WITHOUT THE ILLUSTRATION LEDGER FOR THE ASSOCIATED PRODUCT. LINCOLN MAKES NO ASSUMPTIONS BEYOND THOSE CONTAINED IN THE ILLUSTRATION.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

-An weighted assumed rate of 7.19% is used for Illustration values

-Distributions are taken through loans and withdrawals which reduce your policy's cash surrender value and death benefit and may cause the policy to lapse. Loans are not considered income and are tax free. Withdrawals and surrenders are tax-free up to your cost basis, provided your policy is not a modified endowment contract (MEC). A MEC policy is one in which the life insurance limits exceed certain high levels of premium, or the cumulative premium payments exceed certain amounts specified under the Internal Revenue Code. For policies that are MECs, distributions during the life of the insured, including loans, are first treated as taxable to the extent of income in the contract, and an additional 10% federal income tax may apply for withdrawals made prior to age 59½. THIS REPORT IS NOT VALID WITHOUT THE ILLUSTRATION LEDGER FOR THE ASSOCIATED PRODUCT. LINCOLN MAKES NO ASSUMPTIONS BEYOND THOSE CONTAINED IN THE ILLUSTRATION.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

Commercial Premium Financing

Important Considerations

Prepared for: Swati Chugh

There are several important considerations to review before finalizing a premium financing arrangement. A comprehensive examination of all relevant considerations are beyond the scope of this presentation. For more details on this information, consult with your tax, legal, and financial professionals.

Internal Rate Risk

Fluctuations in interest rates is a significant risk in a Premium Financing Strategy. Changes in interest rates can reduce the potential advantages of the arrangement by increasing collateral needs, increases in out of pocket expenses, and a lower net death benefit to policy beneficiaries.

Lapse Risk

If the policy performs lower than what was originally projected, additional premiums may be needed. This can mean additional loans from the lender will be required to fund the premiums. In the scenario where the lender will not extend further credit, there may be significant risk of policy lapse.

Credit and Collateral Risk

A lender may require additional collateral if more loans are needed to fund premiums. In addition, if the borrower's credit worthiness declines during the loan arrangement, the lender may request further collateral.

Funding Strategy

The funding strategy utilized can have a significant impact on the success of the plan. An accelerated funding strategy can accumulate policy surrender value faster and may seem appealing when the plan includes for the policy's surrender value to be used to repay the loan. Although, an accelerated funding strategy increases the program's initial borrowing costs and increases the required death benefit. A longer funding strategy extends the number of scheduled premiums and can dramatically increase the total loan amount. A final decision about the funding option for life insurance will require evaluation of your specific financial circumstances and needs.

Exit Strategy

It is crucial to develop a loan exit strategy as part of a premium financing plan. There are several options to consider for loan repayment prior to the insured's death. Some programs show the use of the policy surrender value, while others show a "side fund" that pays off the loan principal. In some designs a liquidity event is expected creating sufficient capital to repay the loan prior to death. Sometimes, a plan is illustrated with loans repaid from the policy death benefit, thus showing no exit strategy.

Commercial Premium Financing

Important Information

Prepared for: Swati Chugh

This material is provided as introductory information with regard to the subject matter covered. The views expressed are intended to be accurate and authoritative yet they do not constitute a recommendation or determination of suitability for individual clients. Any opinions expressed in this material do not necessarily reflect the opinion of any organization other than Lincoln Financial.

Considerations

Tax: Any comments about tax treatment simply reflect an understanding of current interpretations of the federal tax laws as they relate to the planning technique. No coverage is given to state tax laws, which must also be considered. Clients and prospects should consult their own legal and tax advisors to determine that the recommended approach is appropriate for their circumstances. At the time solicitation of a particular product takes place, the representative must provide the client with a full and complete personalized basic illustration of the life insurance product proposed. Clients must refer to their personalized basic policy illustration for guaranteed values and other important information. The assumed rates of return noted in various sections of this material are used for illustrative purposes only. Guarantees are backed by the claims-paying ability of the issuing insurance company.

Calculations

Calculation results are based on assumptions and data provided by you, the client. Assumed growth rates for assets and loan interest rates are based upon the information provided and assumed by you. These rates are not a guarantee of the future performance of the life insurance policy or of the loan arrangement.

Assumptions

The material assumes that currently illustrated non-guaranteed elements will continue for all years shown. It is unlikely that the non-guaranteed elements will perform exactly as shown in the material. Actual results depend on many variables, some of which may not be fully accounted for or described in this information. There is a risk that the promissory note may exceed the proceeds of the life insurance policy. Life insurance premiums are payable in accordance with the terms of the insurance policy applied for and non-payment of premiums may cause the policy to lapse and may have significant impact on policy values.

The life insurance policy is completely separate from the loan arrangement and Lincoln Financial® affiliates, their distributors, and their respective employees, financial professionals, and or insurance agents are not a party to the loan arrangement.

Lincoln Financial does not recommend, endorse, sponsor, or otherwise offer Premium Financing. LFG does not have an agreement with any Premium Financing organization, is not a party to the loan agreement, and does not receive any form of compensation from any financing arrangement. There are risks associated with commercial Premium Financing including but not limited to interest rate risk, additional collateral requirements, additional loan renewal requirements, and risk the lender could become insolvent. In addition, if the policy owner fails to repay the loan based on the terms, the loan could default and the insurance contract could lapse.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

Commercial Premium Financing

Explanation of Columns

Prepared for: Swati Chugh

The following are descriptions of terms applicable to the concept of commercial financing, and may be found in the module or may be used in discussion of the topic with your financial professionals.

Column Title	Description
Annual Premium	The yearly out-of-pocket cost for insurance assuming it is not financed
Annual Loan Amount	Annual amount loaned to the Trust
Annual Loan Interest	The amount of loan interest due based on the prior EOY Loan Balance. The loan interest is assumed to be due at the beginning of the year.
Loan Repayment	The amount of the loan repayment from the trust to the Grantor
EOY Loan Balance	Total outstanding loan at the end of the year
Net After Tax Outlay	Annual amount from Grantor to pay premium and loan interest. Annual out-of-pocket cost using Commercial Premium Financing arrangement
Cumulative Net After Tax Outlay	Total amount from Grantor to pay premium and annual loan interest
Cash Surrender Value Net of Loan	Life insurance illustrated surrender values less EOY Loan Balance
Death Benefit Net of Loan	Life Insurance illustrated death benefit net of premium finance amount and, if any, policy distributions.

This report is not valid without the Illustration ledger for the associated product. Lincoln makes no assumptions beyond those contained in the illustration.

This example is for discussion purposes only. Actual results will vary based on your specific situation. Certain assumptions are based on information provided by you. Consult your own tax and/or legal advisor(s) when making tax and legal decisions. Values are hypothetical examples only, not guarantees. A personalized basic life insurance example is required which includes product features and any guarantees.

INDEXED UL

Illustration

Product Overview

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

Lincoln WealthBuilder® IUL is an Indexed Universal Life Insurance policy for individuals seeking permanent death benefit protection, plus the potential for tax deferred growth and access to the policy cash value for present and future needs. Cash value growth may be possible through interest credits in indexed accounts that are linked to, but not directly invested in, the S&P® 500 or Fidelity AIM® Dividend Index. These accounts use growth of an outside financial index over a set timeframe to calculate a crediting rate applied to each index segment at segment maturity. Policy value may increase or decrease. Generally, premium payments and interest credits increase policy value while Monthly Deductions decrease policy value.

Why choose Lincoln WealthBuilder® IUL?

Death benefit protection

Your policy provides valuable death benefit protection for your beneficiaries and will be paid upon the death of the insured. Your policy includes a No-Lapse Provision that can prevent the policy from lapsing regardless of the performance or any future changes in charges.¹

Choices for growth potential

You can choose from eight Indexed Accounts and a Fixed Account which provide opportunities to help meet your long-term goals based on your return potential and downside protection preferences.²

Choices to access your cash value³

Tax-advantaged distributions potentially provide you an additional financial resource or may even supplement your existing retirement income.

Monitor your policy's performance

Your Annual Report and applicable segment maturity notices are automatically sent to you. Reviewing and comparing to your original objectives for purchasing this policy is an important exercise. Ask your financial professional to explain anything you do not understand.

Additional coverage

This policy offers optional riders which may be purchased to modify and enhance the benefits provided by your policy.²

Options to add protection for your future

Your death benefit can become a living benefit when you need it most by adding an accelerated benefits rider (ABR) at policy issue. Choose to add chronic illness or long-term care protection so you can feel confident about the years ahead.²

What's in this illustration?

Solution Overview

An optional summary of how your agent designed your policy to help you meet your goals.

Understanding Your Illustration

Your Illustrated Values

Shows how your policy might perform assuming different performance and expense assumptions.

Additional Information

See how surrender charges affect your cash value on surrender, a list of the illustrated transactions, and more.

Signature Pages

Signing this illustration signifies you understand the features, benefits, and limitations of your illustration.

- ¹ If the no-lapse benefit expires or terminates, the surrender value must be sufficient to keep the policy in-force or additional premiums will be required to avoid policy lapse. Paying only the premium required to satisfy the no-lapse guarantee may lessen the potential for build-up of the policy's account value.
- ² Additional costs may apply.
- ³ Distributions are taken through loans and withdrawals, which reduce a policy's Cash Value and Death Benefit and may cause the policy to lapse. Loans are not considered income and are tax-free. Withdrawals and surrenders are tax-free up to your cost basis, provided your policy is not a modified endowment contract (MEC).

\$9,931,629: Total distributions at an initial interest rate of 7.19% assuming planned premiums and current charges.

How do distributions affect my death benefit?

Loans and withdrawals will reduce your policy's Cash Surrender Value and Death Benefit.

Based on your assumed interest rate and illustrated distribution amount(s), below is a projection of your death benefit at different times throughout your policy with planned premiums and current charges.

		Net death benefit	
Year	Age	@ 7.19%**	
1	44	\$5,750,000	
10	53	\$8,326,633	
20	63	\$3,088,987	
30	73	\$2,915,634	
40	83	\$4,766,676	
Life expectancy ²	44 87	\$7,145,237	
57	100	\$24,225,668	
78	121	\$171,919,383	

¹ Additional benefits may have additional cost.
² Refer to Life Expectancy Report for more details.
³ Assumed interest rates are based on Weighted Allocations. Allocations that include the Fixed Account assume a 3.50% current rate combined with an Index Account rate needed to equal the assumed interest rate shown.
**Assumed illustration rate does not include any applicable interest bonuses. All illustrated Policy Values reflect the addition of any applicable charges and/or interest bonuses. See the Allocations section of *Understanding your Illustration* and the *Interest Accumulation Detail Report* for more information.

This page is designed to highlight important information within this illustration. It is only a summary and you should refer to the entire illustration for more details.

Understanding Your Illustration

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

Death benefit protection

Initial coverage information

This illustration assumes an initial underwriting class shown at the top of this page. The actual underwriting class will be assigned after the underwriting process is complete. Should the actual underwriting class differ from what is assumed in this illustration, including future changes, the premiums and/or values will vary from those contained herein, and a revised illustration will be prepared.

Initial death benefit: \$5,000,000

Initial death benefit option: Increasing by Cash Value

The specified amount and death benefit option assumed at issue are shown above. Please see the Transaction Summary for any illustrated future specified amount or death benefit option changes. Increases in specified amount and some option changes will be subject to underwriting approval. All changes will require a signed request from the Owner. Death benefits shown in this illustration are net of loan.

What happens if the policy is in-force after age 121

If the policy is still in force at the insured's attained age 121, no further premiums may be paid and monthly deductions will cease. If there is a loan, loan interest will continue to accrue. All Indexed Account values will be added to the Fixed Account as each Index Segment matures. The Death Benefit Option will be set to Level, and the Death Benefit will be paid upon death of the insured.

Minimum No-Lapse Provision

Month 1 No Lapse Premium: \$3,656.25

This policy offers a minimum no-lapse premium (NLP). If during the first ten policy years, the Surrender Value is not sufficient to cover the monthly deduction, the policy will continue in force as long as the cumulative minimum premium requirement has been met.

To meet this requirement the cumulative premiums paid must be at least as great as the cumulative minimum no lapse premium due. The cumulative premium paid is the sum of all premiums paid since issue, less any debt and partial surrenders.

The cumulative no lapse premium due is the monthly no lapse premium times the number of completed policy months.

Non-Guaranteed Elements

The policy contains Non-Guaranteed Elements (NGEs) and Indexed Account Non-Guaranteed Elements (Indexed Account NGEs). NGEs include Cost of Insurance Rate, Policy Value Charge, Administrative Charges, Premium Load, interest rate credited to the Fixed Account, interest rate credited to the Holding Account, and interest rate credited to the Dollar Cost Averaging Account. See the Indexed Account section for a list of the Indexed Account NGEs applicable to each Indexed Account.

We may make changes to each of these NGEs and Indexed Account NGEs as described in the policy. Such changes can be made in consideration of one or more of the items listed in the policy. A change to one or more of these NGEs and Indexed Account NGEs can affect your policy's performance, including coverage duration, premiums required to keep your policy in force and Surrender Value.

Many aspects of your life insurance policy are guaranteed, including your minimum credited interest and maximum cost of insurance charges. However, the interest rate credited may exceed the guaranteed rate and monthly charges may be less than the maximum guaranteed charges. The current values columns provide snapshots of your policy assuming different crediting rates and charges than those that are guaranteed. Since these elements are not guaranteed, the values shown are just one range of possible results.

The actual values may be less or more favorable than these illustrated results. You should periodically request an updated inforce illustration to review the status of your Policy Values and guarantees.

This illustration shows how the policy could perform based on certain stated assumptions regarding rate(s) at which interest is credited, Premium and Account Allocation percentages, and policy charges.

Understanding Your Illustration

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

Choices for growth potential

Your *Lincoln WealthBuilder®* IUL policy offers you the flexibility to choose (and change) account and rider options with access to cash value in the future, providing growth potential and cash flow throughout your life¹.

You can pick from Indexed Accounts linked to four different Indexes: the S&P 500® Index, two volatility-controlled indexes based on the S&P 500, and a volatility-controlled index managed by Fidelity. You can also pick a Fixed Account. Start by selecting the account(s) that best suits your needs today.

Index	Index Ticker	Index Features	Indexed Account Offerings
S&P 500	SPX	Tracks the performance of 500 leading publicly traded companies in the US. Does not include dividends.	1-yr Point-to-Point (PTP), 2-yr Point-to-Point (PTP)
S&P 500 Dynamic Intraday TCA 15*	SPFDYNI	Excess return index targeting a 15% volatility level by managing exposure to the S&P500 on an intraday basis.	1-yr PTP, 1-yr PTP Fixed Bonus, 2-yr PTP
S&P 500 Daily Risk Control 10	SPXT10UE	Excess return index targeting a 10% volatility level by managing exposure to the S&P500 daily.	1-yr PTP, 2-yr PTP
Fidelity AIM Dividend 5% VCI	FIDAIMDN	Excess return index targeting a 5% volatility level by blending exposure to high dividend stocks with US treasuries.	1-yr PTP Fixed Bonus
Fixed Account	Lincoln also offers the Fixed Account as an allocation option. The Fixed Account earns interest on a daily basis, at a rate guaranteed at 1.00% annually. The rate currently credited to the Fixed Account is 3.50%. This rate is not guaranteed.		

Industry Standard Indexed Account

To provide a uniform way to compare indexed account performance between different Indexed UL products, an Industry Standard indexed Account is determined for each product using a consistent method. This Standard Indexed Account is a 1-year point to point capped indexed account with defined parameters. The Industry Standard Indexed Account is not offered on this product but is referenced to provide a comparison to the available Indexed Accounts.

A maximum illustrated rate is determined for the products using the applicable Standard indexed Account based on:

- A historical period of S&P® Index Returns (excluding dividends) dating back 66 years from the current calendar year
- Applying the current cap, 100% participation rate and a 0% floor for the product's Standard Indexed Account
- Calculating the average of all 25-year lookback periods starting on every trading day through this time period.

For accounts in this product that have different account parameters, the maximum illustrated rate may be further limited based on a historical calculation using the same methodology and applying the current parameters for those accounts. Further restrictions are placed on accounts with charged-for bonuses. Using the Standard Indexed Account for this product, the table below shows the lowest and highest annualized crediting rate that would have occurred over all 25-year lookback periods during the most recent 66-year period.

Indexed Account	Lowest Annualized Credited Rate	Highest Annualized Credited Rate
Industry Standard Indexed Account	4.94%	8.97%

¹Distributions are taken through loans and withdrawals, which reduce a policy's Cash Value and Death Benefit and may cause the policy to lapse. Loans are not considered income and are tax-free. Withdrawals and surrenders are tax-free up to your cost basis, provided your policy is not a modified endowment contract (MEC). Indexed Account growth is not guaranteed.

*The full name of the index is the S&P 500® Dynamic Intraday TCA Index; the index has a 15% volatility target.

Understanding Your Illustration

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

How index crediting works

On the Allocation Date, **any value in the Holding Account is transferred into a new Index Segment** and the value of the index is recorded.¹

At segment maturity, the change in the index value over the segment period is recorded and adjusted by the participation rate.

If the account has a cap and the growth is above that cap, **then the cap is applied.** If that growth is below the floor, then the floor is used.

Any available bonuses are applied to the capped/floored growth rate.

The **resulting growth rate is applied to the average segment value.**¹ This is your index credit which is added to the ending segment value.²

The **ending segment value is transferred to the Holding Account and the cycle repeats.**

¹ See Method of calculating segment value used for index interest crediting below.

² If the segment value is zero at the end of the segment period, any index credit is applied to the Fixed Account.

Allocation dates

Allocation dates are the dates on which transfers from the Holding Account occur. The Initial Allocation Date is the 15th day of the calendar month following the date we process payment of your initial premium. Once allocations begin, the Monthly Allocation Date is the 15th day of each calendar month thereafter. This illustration assumes the Initial Allocation Date occurs the same day as we process payment of your initial premium. If the actual timing differs from what is illustrated, the ending values will most likely be different than shown in this illustration.

Method of calculating segment value used for index interest crediting

To give credit to segment balances that may vary over the duration of the 12 or 24-month segment period due to monthly deductions, withdrawals or loans, the average monthly segment balance is used for index interest crediting calculations. The segment value is recorded on the 14th of each month, and the total is divided by 12 or 24 to determine the average monthly segment balance, which the index growth rate is then applied to in order to determine the index credit.

Any segment that does not have value at its maturity will still receive an index credit based on the average monthly segment balance and interest crediting will be applied to the Fixed Account.

Indexed Accounts Overview: Fixed Bonus & 1-Year Accounts

This example illustrates how each index segment would have performed (based on current account assumptions) if it had been created on January 1st of each year shown. N/A indicates data that cannot be shown due to regulatory limitations. Historical index changes shown in this illustration are not indicative of future returns.

The **Fidelity AIM® Dividend Index** is an excess return index comprised of an equity component and a fixed income component. Allocation between the components is dynamically rebalanced based on a rules-based strategy targeting a 5% volatility.

The **S&P 500® Index** is a stock price index tracking the performance of 500 leading publicly traded companies in the U.S. This Index excludes dividends.

The **S&P 500® Daily Risk Control 10 Index** provides a benchmark for US equity markets, while seeking greater stability and a reduction of the overall risk level through a 10% volatility objective.

The **S&P 500® Dynamic Intraday TCA 15 Index** is an excess return index created in 2023 that provides exposure to the S&P 500® while applying an intraday volatility control and trend-following mechanism.

Definitions

Surrender Value

The Policy Value less surrender charges and loans.

Surrender Charge

Charges for the surrender of the policy apply for a period from the date of issue or increase, and will vary based on age, gender and risk class. These charges decrease to \$0 over time. A pro-rata partial surrender charge will be assessed upon any requested decrease in Specified Amount during the surrender charge period.

Guaranteed Values

Guaranteed values are calculated using a guaranteed interest rate and charges. Regardless of Account Allocation, this basis will reflect 100% allocation to the S&P 500® Traditional Indexed Account. Actual results may be more or less favorable due to the timing of premiums and policy changes.

Current Values

Current values are calculated using interest rate and charges in effect at the time the policy is put in force and an assumed Indexed Account rate of return and reflect the addition of any applicable interest bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charges.

Midpoint Values

Midpoint values are calculated using an average of current and guaranteed interest and charges and reflect the addition of any applicable interest bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charges.

Guaranteed Interest / Current Charges

Values are calculated using a guaranteed interest rate and the non-guaranteed charges that are in effect at the time the policy is put in force. This basis takes into account the allocation among Indexed Accounts.

Values also reflect the addition of any applicable interest bonuses. Actual results may be more or less favorable due to timing of premiums, policy changes and/or a change in interest rate or charge.

Net Death Benefit

The Death Benefit payable to the beneficiary(ies) of the Policy, including any supplemental term riders and net of any withdrawals and policy loans.

Understanding the mechanics

The **Policy Value** is the total of the Indexed Account(s), Fixed Account, DCA Account, Holding Account and any Fixed Loan Collateral Account value.

We deduct a premium load from each premium paid and then add the balance to the DCA Account and/or Holding Account according to Premium Allocation instructions.

Funds available for transfer such as maturing segment(s) and any eligible portion of DCA Account value also flow through the Holding Account. Then, on each Monthly Allocation Date, amounts are transferred according to Account Allocation Instructions.

Interest crediting

We credit interest to the difference remaining in the Holding Account, DCA Account, Fixed Account and any Fixed Loan Collateral Account. Indexed Account(s) interest is credited on the Segment Maturity Date based on the average monthly segment balance. Any applicable interest bonuses are also applied.

Interest bonuses: Account Value Enhancement (AVE), Multiplier credit

Monthly deductions

Monthly deductions are made every month until the insured's attained age 121, regardless of whether or not premiums are paid. These include cost of insurance and administrative charges, policy value charges, as well as the cost of any additional benefits or riders. Information on these charges can be found within your policy.

All deductions, including monthly deductions and withdrawals, are taken from the Fixed Account, Holding Account, and DCA account until depleted and then any open Index Segment(s) proportionally. Any deductions that deplete an Index Segment will result in a reduced average monthly segment balance at Segment Maturity.

Multiplier Charge

The Multiplier Charge depends on the Multiplier option selected. The charge, if applicable, is deducted at the beginning of each segment from the Opening Segment Balance before any crediting is calculated or applied.

Allocations

Premium Allocations determine how premiums are allocated between the Holding Account and the DCA Account. This illustration assumes the Premium Allocations shown below. If there is a DCA Account allocation but the resulting premium amount is less than the \$1,000 minimum, the premium will be allocated to the Holding Account.

	Holding Account	DCA Account
Premiums other than 1035 exchange	100%	0%
1035 exchange premium	N/A	N/A

Account Allocations determine how the Holding Account value will be allocated between the Indexed Account(s) and the Fixed Account.

Maturing Index Segment Allocations determine how the maturing index segment value will be allocated between the Indexed Account(s) and the Fixed Account.

This illustration assumes the Premium and Account Allocations shown on this page.

The Initial Allocation Date is the 15th day of the calendar month following the date we process payment of your initial premium. Once allocations begin, the Monthly Allocation Date is the 15th day of each calendar month thereafter.

This illustration assumes the Initial Allocation Date occurs the same day as we process payment of your initial premium. If the actual timing differs from what is illustrated, the ending values will most likely be different than shown in this illustration.

Assumed Annualized illustration rate

This illustration uses weighted average crediting rates to represent interest crediting based on assumed rates of return for the different accounts and allocations shown above. This weighting is done separately for one year and two year account allocations. Assumed illustrated rates for each account do not include any applicable interest bonuses. All illustrated Policy Values within this illustration reflect the addition of any applicable interest bonuses.

Additional accounts and premium information

Holding Account

The Holding Account temporarily holds funds intended for Account Allocations until the next Monthly Allocation Date.

Holding Account value includes premiums (including any portion from the DCA Account being systematically transferred) and funds available for transfer such as maturing index account segments.

The Holding Account earns interest on a daily basis, at a rate guaranteed to be no less than 1.00% annually. The rate currently credited by the Company to the Holding Account is 3.50%. This rate is not guaranteed.

Dollar Cost Averaging (DCA) Account

Premiums may be directed to an optional DCA Account from which a portion is then systematically transferred on a monthly basis. Because the Index can vary considerably from month to month, the DCA Account may help smooth out the impact of market fluctuations.

On each Monthly Allocation Date, an amount equal to one twelfth (1/12) of the premiums allocated to the DCA Account within the last 12-month period plus any interest credited since the last Monthly Allocation Date is transferred to the Holding Account for monthly allocation processing.

The DCA Account earns interest on a daily basis, at a rate guaranteed to be no less than 1.00% annually. The rate currently credited to the DCA Account is 4.50%. This rate is not guaranteed.

For premiums other than 1035 exchanges, the DCA Account is only available with annual and semi-annual payment modes and requires a minimum premium amount of \$1,000.

Premium timing

We do not credit premiums until received. Please review the *Transaction Summary* for the timing of premiums used to create this illustration.

If premiums are not received as assumed in this illustration, this will impact Cash Surrender Values. The *Transaction Summary* will show assumptions made that impact timing of premiums such as premium mode (including changes), different sources of funds, and backdating.

These assumptions are illustrative only and actual policy performance will vary to the extent these assumptions are met. Actual results may be more or less favorable than those shown.

Premium outlay

You may vary the amount and timing of your planned premium provided the premium outlay is within guidelines set by the Internal Revenue Service (IRS). Please be aware that the timing of premium payments is critical to calculating and monitoring the policy's compliance with IRS guidelines.

Premium limits and requirements may change after issue if unscheduled changes are made or if planned changes are made at different times than originally assumed.

Please be aware that changes to premium mode, even if shown in this illustration, do not happen automatically and must be requested by the Owner.

Please also note that changing to a more frequent mode (such as quarterly to monthly) will cause an increase in the annualized premium requirement in order to provide the same results. Any modal changes should be verified by requesting an inforce illustration.

Choices to access your cash value

Policy has cash value

Your policy's cash value can provide you several benefits throughout your lifetime:

Keeps the policy in-force after the no-lapse benefit expires or terminates

If the no-lapse benefit expires or terminates, the surrender value must be sufficient to keep the policy in-force or additional premium will be required to avoid a policy lapse. Paying only the premium required to satisfy the no-lapse guarantee may lessen the build-up of the policy's account value. If your illustration shows a death benefit in a year when the associated surrender value for that year is "0", your coverage may be continuing under the No-Lapse Provision.

As a potential source of tax-advantaged distributions

Your policy allows you to take withdrawals (i.e., partial surrenders) and/or loans from the Surrender Value. All illustrated Policy Values, Surrender Values and Death Benefits are reduced by withdrawals, loans and loan interest charged.

Withdrawals

You may withdraw \$500 or more of your Surrender Value at any time.

The withdrawal plus any charge will reduce the Surrender Value and Death Benefit by the same amount and may reduce the specified amount.

Fixed loans

The amount of the loan will be transferred from the Fixed Account and/or Indexed Account(s) into the Loan Account.

The loan will be charged interest and the Loan Account will be credited interest.

Indexed loans

The amount of the loan will be transferred from the Indexed Account(s) and/or Fixed Account and earn interest based on the performance of the Indexed Loan Account to which it is allocated. The loan will be charged a guaranteed rate of 5.50%.

If you decide you no longer need coverage, you can surrender the policy and any Surrender Value will be returned to you (growth above basis may be taxed at ordinary income rates).

You can exchange the policy and transfer the Surrender Value into an annuity, or, pursuant to underwriting, another life insurance policy.

As stated in the contract, **this policy may be converted at any time during policy year 8 without underwriting.** You may convert to an individual permanent life insurance plan offered for sale by us at the time of conversion, subject to the following conditions:

You cannot convert to a policy without surrender charges, or with riders and benefits that waive surrender charges or that enhance surrender values, or a policy that includes riders or benefits that provide optional long-term care coverage.

The product must be one that would otherwise require full underwriting, cannot be a policy that is primarily sold as part of a corporate-owned or corporate sponsored program or benefit plan and must be a policy that we make generally available and distribute through licensed agents.

Understanding Your Illustration

Preferred Non-Tobacco underwriting class

Loans and withdrawals

There are two loan options available. Only one option can be chosen for all loans at any one time. You may switch between loan options no more than once per policy year and only after twelve months have elapsed from the date of the most recent loan.

Indexed loan

Debt is transferred from open indexed account segments and, if necessary, in successive order from the Holding Account, Fixed Account then DCA Account, to the Indexed Loan Accounts based on your allocations. The indexed loan interest charged is guaranteed at 5.50% through age 121, where any outstanding indexed loans will be transferred to a fixed loan with a 3.00% charge. The interest rate credited to the Indexed Loan Accounts is based on the performance of the Indexed Loan Accounts. Loan repayments may allow Indexed Loan Account funds to move back into the Indexed Accounts.

Assumed illustration rate on indexed loan debt

In order to increase the likelihood that illustrated values may be attained, this illustration assumes that the net index interest credited to indexed loan debt including any index interest bonus is no more than 0.50% greater than the guaranteed loan interest charged rate. Actual interest credited will not be limited by these parameters but will simply be limited by the cap/participation rate of the applicable Indexed Loan Account.

Fixed loan

Debt is transferred from the Fixed Account and, if necessary, in successive order from the Holding Account, DCA Account, and then from any open Index Segment(s) proportionally to the Collateral Account. The fixed loan interest charged is guaranteed at 4.00% through policy year 10 and 3.00% thereafter. The interest rate credited to the Collateral Account is guaranteed at 3.00% in all years.

Loan repayments may allow Collateral Account funds to move back into the Fixed Account. To move these funds into an Indexed Account, an owner request is required. For both loan options, interest charged accrues on a daily basis from the date of the loan and is compounded annually. Unpaid interest at policy anniversary is added to and becomes part of the loan principal. Loans reduce both Surrender Value and Death Benefit. Values in the illustration assume loan interest is not capitalized until the first day of the following year so the values are not net of loan interest accrued during the current year.

If an indexed loan is switched to a fixed loan, debt is transferred from the Indexed Loan Account(s) and, if necessary, in successive order from the Holding Account, Fixed Account and DCA Account to the Collateral Account. If a fixed loan is switched to an indexed loan, the Collateral Loan Account value will be transferred to the Holding Account and will be transferred to the Indexed Loan Accounts on the next scheduled allocation date.

Partial surrenders (Withdrawals)

You may withdraw part of your Surrender Value at any time. The minimum partial surrender is \$500. The withdrawal will reduce the Surrender Value and Death Benefit by the same amount and may reduce the specified amount. A surrender charge will apply if this occurs. Any withdrawals that reduce an index segment's value will receive partial credit of the average monthly segment balance at segment maturity. Please note that your values are based upon your chosen monthly withdrawal mode, but the illustration will show an annualized amount for reporting purposes.

Preferred Non-Tobacco underwriting class

Additional coverage

This policy offers optional riders and endorsements (some at an additional cost) to modify and enhance the benefits provided by *Lincoln WealthBuilder® IUL*. These may affect various assumptions underlying the operation of the contract, including level of premium and coverage. Additional information, including the effect of these riders and/or endorsements on the operation of the policy, is available at your request.

Enhanced Overloan Protection Endorsement

Your policy also includes the Enhanced Overloan Protection Endorsement which protects highly funded, heavily loaned policies against lapse. The Enhanced Overloan Protection Endorsement will protect your policy from lapse when Debt equals or exceeds the Policy Value as long as the following conditions are met:

- Your policy is in force, has been in force for at least the minimum required policy years (10) and you have reached the minimum attained age (65)
- The Death Benefit Option is Level (Death Benefit Option 1) or you have switched to a Level Death Benefit Option
- Debt is greater than the Specified Amount
- Policy Value is greater than the Specified Amount
- Your policy is not a Modified Endowment Contract

Accelerated Death Benefit (ABR)

This rider pays a portion of the death benefit upon occurrence of any one or more of three qualifying events. These events include: 1) the occurrence of a specified critical illness or condition; 2) being permanently confined to a nursing home; and 3) being diagnosed as terminally ill (life expectancy of 6 months or less). The acceleration is cumulative and can be no more than 5% for (1), 40% for (2), and 50% for (3). The maximum cumulative accelerated benefit is \$250,000 in total for all qualifying events and \$25,000 for qualifying event (1). Some provisions of this rider may not be applicable in your state. Please refer to the Accelerated Benefit Rider Disclosure for details. The maximum amount available on all policies with an accelerated benefits rider in force with The Lincoln National Life Insurance Company is \$250,000. No additional premium is charged for this rider however there is a charge at the time of acceleration, which is deducted from the benefit payable.

Performance Multiplier Rider (PMR)

Your illustration includes a Performance Multiplier Rider to pursue increased upside potential on eligible indexed accounts. The Multiplier Charge is taken from the segment on the segment start date from each Eligible Indexed Account. The Multiplier Rate is declared prior to the start of the index segment and the credit is calculated at the segment maturity. The rider must be elected at the time of issue, but the options can be turned on and off monthly.

Refer to the *Performance Multiplier Rider* details section of this illustration for information including Multiplier Charges and Multiplier Rates.

Lincoln Financial is the marketing name for Lincoln National Corporation and its affiliates. Affiliates are separately responsible for their own financial and contractual obligations. Distributions are taken through loans and withdrawals, which reduce a policy's Cash Value and Death Benefit and may cause the policy to lapse. Loans are not considered income and are tax-free. Withdrawals and surrenders are tax-free up to your cost basis, provided your policy is not a modified endowment contract (MEC).

The Fidelity AIM® Dividend Index (the "Index") is a product of Fidelity Product Services LLC ("FPS") and has been licensed for use by The Lincoln National Life Insurance Company and its affiliates and reinsurers ("Lincoln"). Fidelity is a registered trademark of FMR LLC. The Index is the exclusive property of FPS and is made and compiled without regard to the needs, including, but not limited to, the suitability needs of Lincoln or any Lincoln life insurance owner. Lincoln exercises sole discretion in determining whether and how the life insurance will be linked to the value of the Index. FPS does not provide investment advice to owners of the life insurance, and in no event shall any Lincoln life insurance policy owner be deemed to be a client of FPS. Neither FPS nor any third party involved in, or related to, making or compiling the Index makes any representation regarding the Index, Index information, Index or market performance, life insurance generally or the Lincoln life insurance in particular, and Lincoln life insurance is not sold, sponsored, endorsed or promoted by FPS or any other third party involved in, or related to, making or compiling the Index (including the Index calculation agent, as applicable). FPS disclaims all warranties, express or implied, including all warranties of merchantability or fitness for a particular use; does not guarantee the adequacy, accuracy, timeliness, and/or completeness of the Index or any data or communication related thereto; and assumes no liability for errors, omissions, or interruptions of the Fidelity AIM® Dividend Index.

The Fidelity AIM® Dividend Index (FIDAIMDN) was created in 2019 for Lincoln. The Index methodology was created based on historical data of the Index components. The methodology is available at: <https://institutional.fidelity.com/app/literature/doc/9896896/fidelity-aim-dividend-index-methodology.html>.

The components of the Index are: Fidelity Dividend Index for Rising Rates LM NR Excess Return designed to reflect the performance of stocks of large and mid-capitalization dividend-paying companies, and Barclays US Treasury Futures Indices with maturities of 2 years, 5 years, 10 years, and 30 years along with a hypothetical cash asset. The weights to each are adjusted monthly based on the fixed income performance trends.

To determine the change in index value of the Index, the historical performance of the components of the Index are calculated using the Index methodology. The interest crediting example is for illustrative purposes only, since this product was not available during the entire period. Actual participation rates would have been different over the different time periods and varied from time to time within those periods. The rates are an indication of index changes in the past, have no bearing on future changes in the index, and are not guaranteed. Actual results may be better or worse than shown.

Surrender Charges

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

Initial death benefit	\$5,000,000.00
Initial death benefit option	Increasing by Cash Value
Initial premium mode	Annual
Riders added	ABR PMR

The amount of money available upon surrender of the policy is your Surrender Value. This value is equal to the Policy Value minus loans, minus surrender charges, if any.

The Surrender Value is shown as of the end of each policy year. The Surrender Value will be different from that shown if the actual net rates of return on the investments chosen fluctuate above or below the rates illustrated for particular policy years.

This policy includes surrender charges that gradually decrease to zero over a fixed number of years. The Net Policy Value is reduced by the surrender charges in the event the contract is canceled. A pro-rata partial surrender charge will be assessed upon any requested decrease in Specified Amount during the surrender charge period. The surrender charges are found below.

The end of year surrender charges for this policy shall be the lesser of the amounts listed below or the then current policy values. Surrender values shown in the *Illustrated Values*, *Guaranteed Values*, and *Current Values* sections reflect the following surrender charges:

Year	Surrender Charge
1	167,100.00
2	163,900.00
3	160,650.00
4	157,350.00
5	154,100.00
6	123,050.00
7	90,250.00
8	58,800.00
9	28,700.00
10	0

Transaction Summary

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

Initial death benefit	\$5,000,000.00
Initial death benefit option	Increasing by Cash Value
Initial premium mode	Annual
Riders added	ABR PMR

This summary is designed to help you understand the timing and amount of policy changes and premiums assumed in this illustration. If the actual timing and/or amount of any transaction differs from what is illustrated, the ending values and benefit periods will most likely be different than currently shown in this illustration. The summary lists transactions requested and processed using Current Charges and Hypothetical rate of return assumptions.

Note that post-issue policy changes are not automatic and must be initiated by the Owner.

Changes such as specified amount increases may require additional underwriting and approval. Please note that the requested transactions may have been modified automatically in an effort to comply with contract and regulatory limitations.

Premium changes do not provide any implied or guaranteed coverage or Policy Values and it is the responsibility of the owner to review annual statements to ensure the policy is funded as desired.

Year	Month	Illustrated Transaction	Details
1	1	Death Benefit Option	Increasing by Cash Value
1	1	Specified Amount	\$5,000,000.00
1	1	Underwriting Class	Preferred Non-Tobacco
11	1	Death Benefit Option changed	Level
1	1	Scheduled Annual Premium	\$266,675.21
11	1	Scheduled Premium changed	\$0.00
20	1	Indexed Loan	Annually thru year 43 month 1
79	1	Loan Option Changed	Fixed

What is Post-Issue Policy Management?

Assumed policy changes in your illustration do not happen automatically. Transactions in the table on this page will generate a reminder notification prior to the policy anniversary when the changes are illustrated to occur, but will not automatically take place without action from the Owner. These planned policy changes will also be shown in the Annual Policy Statement received shortly after each policy anniversary. It is important to regularly evaluate policy performance and request changes be made as appropriate or consider adjusting future planned transactions in order to continue to meet long term goals and objectives.

Advance notification of these future planned changes will be sent to the policy owner approximately 60 days prior to the policy anniversary date in the year the change is illustrated

Premium Allocation instructions

You must provide us with written Premium Allocation instructions which will determine how premiums will be allocated between the Holding Account and the Dollar Cost Averaging (DCA) Account. If premiums are directed to the DCA Account, a portion will be systematically transferred to the Holding Account for monthly Account Allocations. The DCA Account requires a minimum premium amount of \$1,000. If the premium amount is less than the minimum, the premium will be allocated to the Holding Account.

	Holding Account	DCA Account
Premiums other than 1035 exchange	100%	0%
1035 exchange premiums	N/A	N/A
Use whole percentages only. The total sum for each set of allocations must equal 100%.		

Account Allocation instructions

You must provide us with written Account Allocation instructions which will determine how the Holding Account Value will be allocated between the Indexed Account(s) and Fixed Account. Written Account Allocation instruction changes received later than 2 business days prior to a Monthly Allocation Date will be delayed to the next Monthly Allocation Date.

I/We hereby authorize The Lincoln National Life Insurance Company and its affiliates ("Lincoln") to act on telephone / internet instructions from: (check all that apply)

☐

Myself / Ourselves

☐

Financial Professional (or his/her administrative staff)

- I understand that only I can authorize loans and withdrawals and that any loan will be made subject to the provisions of my Indexed Universal Life policy and Lincoln's administrative procedures.
- I acknowledge that although procedures have been established to reduce the risk of unauthorized instructions, such risk still exists, and I agree that Lincoln will not be liable for any loss arising from any telephone/internet instruction or direction. I agree to indemnify and hold Lincoln, its affiliates, employees, and representatives harmless from any and all losses (including expenses) arising from such instructions.

Index Signature Page (continued)

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

- I/We confirm that I/we have received a copy of the illustration and that my/our financial professional has disclosed to me/us the following information:
- This is a Universal Life policy with interest credited based on the performance of the Fixed Account and Indexed Accounts I/we have selected. Unless the fixed and index credits in my policy are greater than the policy charges, it will result in a reduction of my Policy Value which may cause my policy to lapse, unless I pay additional premium.
- I/We have had the opportunity to request and review the optional *Policy Expense Analysis Report* as well as the optional *Interest Accumulation Detail Report* available in the illustration.
- I acknowledge the importance of actively monitoring my policy's performance through statements and inforce illustrations.
- I understand that this illustration includes Non-Guaranteed Elements which are subject to change and could be higher or lower.
- The Policy Values are not linked to or directly participate in any stock, bond or equity investments.
- Any hypothetical values presented in this illustration are not guaranteed and actual future results could either be higher or lower than those shown. The financial professional has explained to me/us that the values are not guaranteed.
- Past performance of the Indexed Accounts presented in this illustration is no guarantee of future performance of those Indexed Accounts.
- Interest credited to the index segments will not occur until the end of that segment. This illustration uses a weighted rate to represent interest crediting based on an assumed Indexed Account rate of return for each account. This rate does not include any applicable interest bonuses. All illustrated Policy Values within this illustration reflect the addition of any applicable interest bonuses. See the Assumed Rate Section of *Understanding Your Illustration* and the optional *Interest Accumulation Detail Report* for more information.
- The final decisions made regarding the allocations of values between the Fixed Account and Indexed Accounts available with this policy are mine/ours and are based on my/our individual situation, needs and goals.
- If the policy applied for is issued to me/us, I/we understand that I/we will have a period of time to review the policy, as stated on the cover page of the policy, prior to accepting the policy.
- All deductions, including monthly deductions and withdrawals, are taken from the Fixed Account, Holding Account, and DCA account until depleted and then any open Indexed Segment(s) proportionally. Any deductions that deplete an index segment will result in a reduced average monthly segment balance at segment maturity. I/We cannot transfer money from an index segment into the Fixed Account during the segment year.
- I have received a copy of the equity indexed disclosure material, as contained in this illustration, for the policy applied for.

By signing below, I agree to the following:

- I am applying for an equity indexed life insurance policy.
- The interest credited to the policy may be affected by the performance of an equity index.
- The policy does not directly participate in any stock or equity investments or index; I am not buying an ownership interest in any stock or index.
- I understand that the guaranteed interest rate credited to any available equity index fund will never be less than the guaranteed floor associated with each account.

Date

Proposed Insured Signature

Date

Proposed Owner/Applicant Signature

Date

Proposed Owner/Applicant Signature

- I certify that the equity indexed disclosure material has been presented to the Proposed Owner/Applicant and a copy was provided to the Proposed Owner/Applicant. I certify that I have explained Indexed Account features of this policy and have made no statements that are misleading regarding past performance of the Indexed Account as related to the future performance of those accounts. This illustration has been presented to the applicant in its entirety, and I have explained that any hypothetical elements are not guaranteed and actual future results could be either higher or lower than those shown. I have made no statements that are inconsistent with the demonstration.

By signing below, I attest that I have informed the Applicant of the following:

- The policy for which they are applying is an equity indexed life insurance policy. The interest credited to the policy may be affected by the performance of an equity index. This does not mean the return will equal that of the index.
- I have not made any statements, promises or inferences about the expected future equity values of this contract.
- I acknowledge that the guaranteed interest rate credited to any available equity index fund will never be less than the guaranteed floor associated with each account.

More Information on Accessing Your Policy Value

Initial death benefit	\$5,000,000.00
Initial death benefit option	Increasing by Cash Value
Initial premium mode	Annual
Riders added	ABR PMR

Building Policy Value takes time. But when you're ready to take money out of your life insurance policy, you have options:

Withdrawals
also called *Partial Surrenders*

Generally, withdrawals from the accumulated cash value of your policy are income tax-free up to the amount of the premiums you have paid. A withdrawal in excess of the amount of premium paid may be considered income and will likely be taxed at ordinary income tax rates.

Once your withdrawals equal total premiums paid, you may be able to borrow against the policy without tax consequences if your policy is not a modified endowment contract (MEC).

A withdrawal will reduce the account value and death benefit. There is a minimum withdrawal amount of \$500.

Removing too much Policy Value could cause your policy to lapse.

Borrowing against the policy
using *policy loans*

You may also be able to borrow from your life insurance policy. The greater your insurance policy's cash value, the more you can borrow, although the policy loan cannot exceed the cash value less any surrender charges.

Lincoln will assess an interest rate on the borrowed funds, but you can decide if and when you want to repay the loan. However, any accrued interest increases the loan balance and could cause the policy to lapse if the loan balance exceeds your policy's cash surrender value and could result in tax consequences.

You have a flexible schedule if you choose to repay your loan: you can repay the loan whenever you want.

If you pass away, the outstanding amount plus any unpaid interest is subtracted from your Death Benefit.

A loan from your life insurance policy is typically not considered income so it doesn't increase your tax expense as long as the policy does not lapse.

What happens if my policy is a modified endowment contract (MEC)?

Each policy will have a maximum premium that can be paid. If you pay more than that premium then the policy becomes a Modified Endowment Contract (MEC). Taxation of distributions from a non-MEC policy is first-in-first-out (FIFO). However, taxation of distributions from a MEC is last-in-first-out (LIFO), with taxable gain distributed first. Loan interest itself becomes taxable when the policy is a Modified Endowment Contract. Distributions prior to age 59½ may incur an additional 10% penalty. The death benefit of a MEC still transfers income tax-free to beneficiaries.

What happens if my policy lapses?

In addition to losing valuable death benefit coverage and future Policy Value growth potential, any gain (including unpaid loans) in the policy is realized as taxable income for that year if the policy lapses.

Lincoln WealthBuilder® IUL includes a feature to avoid lapse of highly-funded and heavily-loaned policies called Enhanced Overloan Protection Endorsement which protects highly-funded, heavily-loaned policies against lapse. More information can be found on the *Additional Coverage* page in the *Understanding Your Illustration* section.

More Information on Accessing Your Policy Value (continued)

Swati Chugh, 43 year-old Female, issued in California
Preferred Non-Tobacco underwriting class

There are two ways to borrow against the Surrender Value of your policy: fixed loans and indexed loans. With two loan options available, you can decide which option makes the most sense for you when you are ready to borrow from your policy. Under either option the loan balance will continue to grow based on the annual charged rate*. Any interest credits (fixed loan) or index credits (indexed loan) are applied to the nonloaned portion of the Policy Value.

Indexed loans

The policy cash value you borrow will be eligible to earn index credits:

- The money you borrow from your policy is transferred from the Indexed Account(s) and/or Fixed Account and will earn index credits based on the performance of the selected Indexed Loan Account(s). At segment maturity, any index credits are transferred to the holding account to be allocated to the *nonloaned* Indexed/Fixed Accounts according to your premium allocation instructions.
- You'll have a guaranteed loan interest rate charged on borrowed funds that will accumulate on the loan balance. The annual rate is 5.50% and any interest charges will be added to the loan balance annually*.
- It is possible for the credited rate to be more or less than the charged rate, but the credited rate will never be less than the guaranteed minimum interest rate.

Fixed loans

For a more predictable approach, the fixed loan offers a guaranteed interest charge and credit so you know exactly where you stand.

- Debt is transferred from the Fixed Account and, if necessary, in successive order from the Holding Account, DCA Account, then from any open Index Segment(s) proportionally to the Collateral Account.
- The Fixed Loan interest charged is guaranteed at 4% through policy year 10 and 3% thereafter and will increase the loan balance in the Collateral Account*.
- The interest rate credited to the Collateral Account is guaranteed at 3% in all years, creating a zero net cost in years 11+. In most cases, credited interest is transferred to the Fixed Account.

Which loan should I choose

When considering which loan option is most appropriate, consider the long-term return that you think is reasonable for your policy. The table below highlights three scenarios that may help you compare the net cost and distribution potential. Also keep in mind that an indexed loan is more susceptible to volatility than a fixed loan.

Indexed loan	Index crediting	Guaranteed loan interest charged	Net result	Long-term distribution potential with indexed loan
Return <i>exceeds</i> charged rate of 5.50%	7.00%	5.50%	1.50%	Better than fixed loan
Return <i>equals</i> charged rate of 5.50%	5.50%	5.50%	0%	Same as fixed loan**
Return at the minimum crediting rate	0%	5.50%	-5.50%	Worse than fixed loan
	A	B	A - B	

Since you are able to switch between loan options, you may consider a combination approach where you want the growth potential of an indexed loan during the accumulation phase of the policy and then transfer the balance to a fixed loan to provide a more stable loan balance in the later years.

*Loan interest can be paid out of pocket annually by policy owner to avoid interest being added to loan balance
**Year 11+, net zero cost loan
